#### Government College of Engineering, Karad Final Year (Sem –VIII ) B. Tech. Mechanical **Engineering DE2144: MEMS and Nanotechnology Teaching Scheme Examination Scheme** 03 Hrs/week MSE Lectures 20 Tutorials Total Credits 03 **ISE** 20 ESE 60 02 Hrs.30 Min Duration of ESE **Course Outcomes (CO)** Students will be able to Understand concept of micro-nano systems. Apply engineering knowledge to different processes of micro-nano systems manufacturing. 2. Appraise the working principles of various micro sensors and micro actuators. 3. Design a micro system and develop a process sequence for its manufacturing. Hours **Course Contents Overview and Introduction** Unit 1 New trends in Engineering and Science: Micro and Nano scale systems Introduction to (06)Design of MEMS and NEMS, Overview of Nano and Micro electromechanical Systems, Applications of Micro and Nano electromechanical systems, Micro electromechanical systems, devices and structures Definitions, Materials for MEMS: Silicon, silicon compounds, polymers, metals. **MEMS Fabrication: Bulk Lithography** Unit 2 (06)Microsystem fabrication processes: Photolithography, Ion Implantation, Diffusion, Oxidation, Thin film depositions: LPCVD, Sputtering, Evaporation, Electroplating; Etching techniques: Dry and wet etching, electrochemical etching. Unit 3 **MEMS Fabrication: Surface Micromachining** (08)Surface micromachining: Working Principle of Surface Micromachining, Surface micromachining materials, Surface micromachining layers, Fabrication process of surface micromachining, advantages and disadvantages, applications. Case study: Surface Micro machined accelerometer, Nano electro mechanical relays. Unit 4 MEMS Fabrication: LIGA and Micro-Nano Stereo lithography (08)High Aspect-Ratio (LIGA and LIGA-like) Technology; Packaging: Microsystems's packaging, Essential packaging technologies, Selection of packaging materials. Micro-Nano Stereo lithography: need of micro stereo lithography and limitations of conventional processes, System components of micro stereo lithography, Methods of Micro stereo lithography, Need of nano stereo lithography, Recent trends in nano stereo lithography. Micro Sensors & Micro Actuators Unit 5 MEMS Sensors: Design of Acoustic wave sensors, resonant sensor, Vibratory gyroscope, (08)Capacitive and Piezo Resistive Pressure sensors- engineering mechanics behind these Microsensors. Case study: Piezo-resistive pressure sensor Design of Actuators: Actuation using thermal forces, Actuation using shape memory Alloys, Actuation using piezoelectric crystals, Actuation using Electrostatic forces (Parallel plate, Torsion bar, Comb drive actuators), Micromechanical Motors and pumps. Case study: Comb drive actuators Unit 6 **Design Aspects of Micro-Nano Systems** (04)Applications of MEMS in Cantilever sensors, Emulsion equipment, Humidity sensor, Liquid lenses, Micro spectrometer. Tutorials- -- Assignments on each Unit- 6 Nos. Text Books

#### Government College of Engineering, Karad First Year (Sem – I) M. Tech. Mechanical **Engineering ME OE2118:- Business Analytics Teaching Scheme Examination Scheme** Lectures 03 Hrs/week MSE 20 Tutorials ISE 20 Total Credits 03 **ESE** 60 Duration of ESE | 02 Hrs 30 Min **Course Outcomes (CO)** At the end of this course, student will be able to: demonstrate knowledge of data analytics. evaluate data and deep analytics using critical thinking in decisions making. Apply technical skills in predicative and prescriptive modeling to support business decision-making. **4.** Analyse data into clear, actionable insights. Course **Hours Contents** (09)Unit 1 Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organization, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modeling, sampling and estimation methods overview. Trendiness and Regression Analysis: Modelling Relationships and Trends in Data, simple Unit 2 (08)LinearRegression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology. Organization Structures of Business analytics, Team management, Management Issues, (09)Unit 3 Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modelling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization. Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Unit 4 **(5)** Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models. Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model. Decision Analysis: Formulating Decision Problems, Decision Strategies with the without Unit 5 **(5)** Probabilities, Decision Trees, The Value of Information, Utility and Decision Making. Recent Trends in: Embedded and collaborative business intelligence, Visual data recovery, (04)Unit 6 Storytelling and Data journalism. Business analytics third edition by Pearson Reference Books

#### Government College of Engineering, Karad First Year (Sem – I) M. Tech. Mechanical **Engineering ME2128:- Industrial Safety Teaching Scheme Examination Scheme** Lectures 03 Hrs/week MSE Tutorials ISE 20 Total Credits 03 **ESE** 60 Duration of ESE 02 Hrs 30 Min **Course Outcomes (CO)** At the end of this course, student will be able to: 1. Realize the basics of Occupational Health Hazards. **2.** Introduce about common occupational diseases 3. Define industrial hygiene and principles. **4.** Get acquainted with the principles of ergonomics. Course **Hours Contents** Unit 1 Introduction and Scope (20) **(6)** Definition of Occupational Health as per WHO/ILO. Occupational Health and Environmental SafetyManagement – Principles practices. Common Occupational diseases: Occupational Health Management Services at the work place. Pre-employment, periodic medical examination of workers, medical surveillance for control of occupational diseases and health records. Monitoring for Safety, Health and Environment (20) Unit 2 **(8)** Occupational Health and Environment Safety Management System, ILO and EPA Standards. Industrial Hygiene: Definition of Industrial Hygiene, Industrial Hygiene: Control Methods, Substitution, Changing the process, Local Exhaust Ventilation, Isolation, Wet method, Personal hygiene, housekeeping and maintenance, waste disposal, special control measures. Chemical Hazard: Introduction to chemical hazards, dangerous properties of chemical, dust, gases, fumes, mist, Vapours, Smoke and aerosols. Route of entry to human system, recognition, evaluation and control of basic hazards, concepts of dose response relationship, bio-chemical action of toxic substances. Concept of threshold, limit values. Occupational Health and Environmental Safety Education Element of training cycle, Assessment Unit 3 **(7)** of needs. Techniques of training, design and development of training programs. Training methods and strategies types of training. Evaluation and review of training programs. Occupational Health Hazards, Promoting Safety, Safety and Health training, Stress and Safety, Exposure Limit Occupational Safety, Health and Environment Management Bureau of Indian standards on safety Unit 4 **(7)** and health 14489 - 1998 and 15001 - 2000, OSHA, Process Safety Management (PSM) as per OSHA, PSM principles, OHSAS - 18001, EPA Standards, Performance measurements to determine effectiveness of PSM. Unit 5 Periodic and preventive maintenance: Periodic inspection-concept and need, degreasing, **(7)** cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Importance of Industrial safety, role of safety department, Safety committee Unit 6 **(5)** and function, Role and responsibilities of safety officer **Reference Books** Maintenance Engineering Handbook, Higgins & Morrow, Da Information Services. 1.

Wagner, Principles of Operations Research, PHI, Delhi, 1982.									
Course Outcomes (CO)  At the end of the course, the students will able to  1. apply the dynamic programming to solve problems of discreet and continuous variables. 2. apply the concept of non-linear programming 3. carry out sensitivity analysis 4. model the real-world problem and simulate it.  Course Contents  Unit 1 Optimization Techniques, Model Formulation, models, General L.R Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models  Unit 2 Formulation of a LPP - Graphical solution revised simplex method - duality theory - dual simplex method - sensitivity analysis - parametric programming  Unit 3 Nonlinear programming problem - Kuhn-Tucker conditions min cost flow problem - max flow problem - CPM/PERT  Unit 4 Scheduling and sequencing - single server and multiple server models - deterministic inventory models  - Probabilistic inventory control models - Geometric Programming.  Unit 5 Competitive Models, Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation  Text Books  1. J.C. Pant, Introduction to Optimization: Operations Research, Jain Brothers, Delhi, 2008  2. Hitler Libermann Operations Research: Prentice Hall of India 2010  Reference Books  1. H.A. Taha, Operations Research, An Introduction, PHI, 2008  2. H.M. Wagner, Principles of Operations Research, PHI, Delhi, 1982.	Total	Credits	03						20 Min
At the end of the course, the students will able to  1. apply the dynamic programming to solve problems of discreet and continuous variables.  2. apply the concept of non-linear programming  3. carry out sensitivity analysis  4. model the real-world problem and simulate it.  Course Contents  Unit 1 Optimization Techniques, Model Formulation, models, General L.R Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models  Unit 2 Formulation of a LPP - Graphical solution revised simplex method - duality theory - dual simplex method - sensitivity analysis - parametric programming  Unit 3 Nonlinear programming problem - Kuhn-Tucker conditions min cost flow problem - max flow problem - CPM/PERT  Unit 4 Scheduling and sequencing - single server and multiple server models - deterministic inventory models - Probabilistic inventory control models - Geometric Programming.  Unit 5 Competitive Models, Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation  Text Books  1. J.C. #### Government College of Engineering, Karad First Year (Sem – I) M. Tech. Mechanical **Engineering ME OE1158:- Composite Materials Teaching Scheme Examination Scheme** Lectures 03 Hrs/week MSE 20 Tutorials Total Credits 03 ISE 20 ESE 60 Duration of ESE | 02 Hrs 30 Min **Course Outcomes (CO)** At the end of this course, student will be able to: 1. demonstrate knowledge of composite materials and its importance in todays world. Students will be able to plan the processing of composite materials select correct reinforcement and matrix for perticular application demonstrate knowledge of preparation technologies of composite materials Course Hours **Contents** INTRODUCTION: Definition – Classification and characteristics of Composite materials. Unit 1 **(7)** Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance. Unit 2 REINFORCEMENTS: Preparation-layup, curing, properties and applications of glass fibers, **(7)** carbon fibers, Keylar fibers and Boron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions. Manufacturing of Ceramic matrix composite; Metal Matrix Composites:Metal matrix and Unit 3 **(6)** reinforcement; Manufacturing processes for Metal Matrix Composites:Dispersion hardended and particle composite; Manufacturing processes for Meta matrix composites:Layer composites and in-Itration method. Unit 4 Manufacturing of Polymer Matrix Composites: Preparation of Moulding compounds and **(6)** prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications. Unit 5 Prevention of Damage, repair of Composites and selection of processes; Ceramic matrix **(7)** composites: Hot isostatic processing; Non – destructive testing of Composites; Manufacturing process selection: Cost, performance, size shape, rate of production. Steps for process selection, green composite. Unit 6 Nano composites <del>(7)</del> Nanocomposite-What is Nanotechnology? Importance of length scale, meaning of NANO, uniqueness of nano structured materials, polymer nanomaterials , different types of Nanoparticles, Synthesis of nanocomposite, APPLICATIONS: High temperature applications: fire retardant, flame retardant nanocomposite applications, Thermoset nanocomposites for rocket ablative materials, nanomodified carbon-carbon composites, green composites, recent trends in nanocomposites. **Text Books** Material Science and Technology – Vol 13 – Composites by R.W.Cahn – VCH, West Germany. Materials Science and Engineering, An introduction. WD Callister, Jr., Adapted by R. 2. Balasubramaniam, John Wiley & Sons, NY, Indian edition, 2007.

#### Government College of Engineering, Karad First Year (Sem – I) M. Tech. Mechanical- Design **Engineering AU 2129: Disaster Management (Audit Course – I) Teaching Scheme Examination Scheme** Lectures 02 Hrs/week MSE Tutorials ISE Total Credits 00 **ESE** Duration of ESE **Course Outcomes (CO)** At the end of the course, the students will: 1. learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives develop an understanding of standards of humanitarian response and practical relevance in specific types of and conflict situations. Course Hours **Contents** Unit 1 Introduction (04)Disaster: Definition, Factors and Significance; Difference Between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types and Magnitude. Unit 2 Repercussions of Disasters and Hazards: Economic Damage, Loss of Human and (04)Animal Life, Destruction of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts. Unit 3 **Disaster Prone Areas in India** (04)Study of Seismic Zones; Areas Prone to Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with Special Reference to Tsunami; Post-Disaster Diseases And Epidemics **Disaster Preparedness and Management** Unit 4 (04)Preparedness: Monitoring of Phenomena Triggering A Disaster or Hazard; Evaluation of Application of Remote Sensing, Data from Meteorological and Other Agencies, Media Reports: Governmental and Community Preparedness. Unit 5 Risk Assessment (04)Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques at Risk Assessment, Global Co-Operation in Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival Unit 6 **Disaster Mitigation** (04)Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends in Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India. **Tutorials-** --**Text Books** R. Nishith, Singh AK, "Disaster Management in India: Perspectives, issues and strategies", New Royal book Company. Sahni, Pardeep Et.Al. (Eds.), "Disaster Mitigation Experiences and Reflections", Prentice Hall of India, New 2. Goel S. L., Disaster Administration and Management Text And Case Studies", Deep &Deep Publication Pvt.

#### Government College of Engineering, Karad First Year (Sem – I) M. Tech. Mechanical- Design **Engineering DE 2110: Finite Element Analysis Teaching Scheme Examination Scheme** Lectures 03 Hrs/week **MSE Tutorials** 00 Hrs/week **ISE** 20 Total Credits 03 ESE 60 Duration of ESE 02 Hrs 30 Min Course Outcomes (CO): students will be able to -Understand the fundamentals of fundamentals of Finite Element Analysis and Variational Principles Analyse 1D structural and heat transfer problems 3. formulate 2D FEA problems Solve and analyse Dynamic problems using FEA Course Hours **Contents** Introduction to FEM, basic concepts, historical background, applications of FEM, general Unit 1 (04)description, comparison of FEM with other methods, variational approach, Galerkin's Methods. Co-ordinates, basic element shapes, interpolation function, Virtual energy principle, Rayleigh – Ritz method, properties of stiffness matrix, treatment of boundary conditions, solution of system of equations, shape functions and characteristics, Basic equations of elasticity, straindisplacement relations. Unit 2 1-D Structural Problems: Axial bar element – stiffness matrix, load vector, temperature effects, (10)Quadratic shape functions, and problems. Analysis of Trusses: Plane Trusses and Space Truss elements and problems Analysis of Beams: Hermite shape functions – stiffness matrix – Load vector Problems. Unit 3 2-D Problems: CST, LST, force terms, Stiffness matrix and load vectors, boundary conditions, (10)Iso- parametric elements – quadrilateral element, shape functions – Numerical Integration. Finite element modelling of Axi-symmetric solids subjected to Axi-symmetric loading with triangular elements. 3-D Problems: Tetrahedron element – Jacobian matrix – Stiffness matrix. Unit 4 Steady state heat transfer, 1 D heat conduction governing equation, Boundary conditions, One (04)dimensional element, Functional approach for heat conduction, Galerkin approach for heat conduction, Heat flux boundary condition Unit 5 Formulation for point mass and distributed masses, Consistent element mass matrix of one-(08)dimensional bar element, truss element, axisymmetric triangular element, quadrilateral element, beam element. Lumped mass matrix, Evaluation of Eigen values and Eigen vectors, Applications to bars, stepped bars, and beams. Introduction to FES software Packages, Algorithmic approach for developing the code by the individuals Non-linear Analysis - Sources and types of non-linearity, Incremental approach to solution of Unit 6 (04)nonlinear problems, Iterative solution methodologies, Considerations for simulation of nonlinear problems. **Tutorials/ assignments** Implementation of FEA MATLAB programs on 1D structural analysis 1D Heat Transfer problem 1D dynamic analysis Implementation of FEA using commercial ANSYS package Stress analysis of bracket Structural analysis of pump analysis for rigidity analysis Heat Transfer and Thermal stress analysis of Engine Block Contact analysis

#### Government College of Engineering, Karad First Year (Sem – II) M. Tech. Mechanical- Design **Engineering DE 2202: Computer Aided Design Teaching Scheme Examination Scheme** Lectures 03 Hrs/week **MSE Tutorials** 00 Hrs/week **ISE** 20 **Total Credits** 03 ESE 60 Duration of ESE 02 Hrs 30 Min **Course Outcomes (CO)** Understand the fundamentals of Geometric modelling 2. Develop and manipulate the curves and surfaces using parametric equations Implement the transformation and projection over the geometric model 3. Develop and manipulate the solid models using different modelling approaches Hours Course **Contents** Unit 1 Introduction: Definitions, Historical developments. Geometric Modeling, Nameable Unnamable (04)shapes, Affine and convex combination. Introduction to Equations - Implicit, explicit, parametric. Coordinate systems Unit 2 Design of Curves: Cubic Hermite curves - Algebraic and geometric forms, Blending functions, (10)Subdivision, Reparameterization, Truncating, Extenuating and subdividing. Space curve, four point form, straight line and Composite Hermite curves (C^n and G^n continuity). Spline curve, Bezier curves - Control polygons and Bernstein basis, De Casteljau algorithm, First and second derivatives at the ends, Continuity aspects. B-Spline Curves - periodic, open and non-uniform knot vectors and corresponding curves, Rational B-splines, NURBS, and Quadratic variety. Design of surfaces: Hermite Surface - Algebraic and geometric form, tangent and twist vectors, Unit 3 (10)Normal, parametric space of a surface, blending functions, Subdivision and Reparameterization, Continuity of surfaces. Sixteen point form, four curve form, plane surface, cylindrical surface, ruled surface, surface of revolution. Bezier surface - Control net representation, Direct and indirect De Casteliau algorithm for Bezier surface, Continuity aspects. B-Spline Surfaces periodic, open and non-uniform knot vectors and corresponding surfaces, Rational B-splines, NURBS. Transformations in 2D and 3D, Translation, Rotation, Scaling Symmetry and Reflection, Unit 4 (04)affine transformation. Homogeneous Transformation. Orthotropic projections, Axonometric Projections, Oblique Projections, perspective Transformations. Introduction to Solid Modelling - Topology of closed paths, piecewise Flat surface, Topology of Unit 5 (08)closed curved surfaces, Generalised concept of boundary, set theory, Boolean operators(Union, Difference and Intersection), Set memberships classification, Euler and modified form of equations. Solid model construction: Graph based methods, Boolean models, Instances and parameterised shapes, Cell decompositions, Representations - Quadtree, Octree, Half space, sweep, Boundary Representation (B-Rep), Constructive Solid Geometry (CSG) Unit 6 Introduction to analytical properties, relational properties and intersections, data transfer (04)formats for Cad. Applications Tutorials/ assign ments Implementations of the algorithms on MATLAB such as: Hermite curve Hermite/Bezier surface B-spline curve/surface) 2D Transformation

Construction of solid and surface Models on any of the high end solid modellers (Nx 11.0, solid

#### Government College of Engineering, Karad Second Year (Sem – III) M. Tech. Mechanical- Design **Engineering** DE 2301: Dissertation Phase- I **Teaching Scheme Examination Scheme** Lectures Practicals 20 Hrs/week **ISE** 100 **Total Credits ESE** 100 Course Outcomes (CO) At the end of the course the students will be 1. Exposed to self-learning various topics. 2. able to learn to survey the literature such as books, national/international refereed journals and contact resource persons for the selected topic of research. 3. able to learn to write technical reports 4. able to develop oral and written communication skills to present and defend their work in front of technically qualified audience. The dissertation work to be carried out individually commences in the Semester III and extends through Semester IV. The topic of dissertation work should be related to the areas of Design/ Mechanical Engineering Applications. Applications of computer as a tool for conceptualization, design, analysis, optimization, manufacturing, manufacturing planning/management, quality engineering, simulation of products / processes / mechanisms / systems, experimental study, etc. are to be encouraged and preferred. SYNOPSIS APPROVAL The Head of the Department shall appoint a committee comprising of the Guide and two experts to review and approve the synopses. **Course Contents** It shall include the problem definition, literature survey, approaches for handling the problem, finalizing the methodology for the dissertation work and design calculations / experimental design etc. A report of the work shall be submitted at the end of Semester III after approval by the Guide and endorsement of the Head of Department. It will be assessed for term work, by the evaluation committee (\*) appointed by the Head of the Department, for appropriateness, sufficiency of contents and offer suggestions if any. (\*) Note: The evaluation committee shall consist of the Guide, one senior expert faculty member and the Head of the Department or his/her representative. The term work under this submitted by the student shall include. 1) Work diary maintained by the student and countersigned by his guide/ industrial guide. 2) The content of work diary shall reflect the efforts taken by candidates for (a) Searching the suitable project work and literature review (b) Visits to different factories or organizations. (c) The brief report of feasibility studies carried to come to final conclusion. (d) Rough / free hand sketches/ drawing. (e) Design calculations carried by the student. The student has to make a presentation before departmental committee comprising proposed title, literature review, research gape/ objectives, research plan and expected outcome. It is expected to complete minimum 40 % research work. Evaluation of Dissertation- I will be made as per rubrics

	Government College of Engineering, Karad								
Second Year (Sem – III) M. Tech. Mechanical-Design									
Engineering									
		DE 2302: M	OOC online course						
Teaching Sch	Teaching Scheme Examination Scheme								
Lectures				-					
Practicals	-			-					
Total Credits	03								

Online courses available on digital platform like Moocs/ NPTEL/ Coursera etc., during the academic semester will be reviewed and listed by departmental faculty board before start of every semester. Suitable course for registered candidate will be recommended by seminar / dissertation guide and programme head considering skill sets and knowledge required for dissertation work of the individual candidate from the list. It shall have minimum 8-12 hrs duration, peer graded assignment and examination to award grade by online course offering agency. It will be approved by Dean (academic) case to case.

In case online course is not available, departmental committee will specially design syllabus for course under self-learning mode and guide will conduct end semester examination to award the grade.

#### Government College of Engineering, Karad Second Year (Sem – IV) M. Tech. Mechanical- Design **Engineering** DE 2401: Dissertation Phase -II **Teaching Scheme Examination Scheme** Lectures $1\overline{00}$ Practicals 32 Hrs/week ISE **Total Credits** 16 **ESE** 200 Course Outcomes (CO) At the end of the course the students will be able to 1. design and develop an experimental set up/equipment/test rig. 2. conduct tests on existing set ups/ Equipment and draw logical conclusions from the results after analyzing them. 3. either work in a research environment or in an industrial environment. 4. conversant with technical report writing. 5. present and convince their topic of study to the engineering community. **Course Contents** The candidate shall submit the detailed report as per the synopsis approved by the university, of the dissertation work in the prescribed format after approval by the Guide and endorsement by the Head of the Department.
