

**Government College of Engineering, Karad**

**Final Year (Sem – VII) B. Tech. Civil Engineering**

**CE 2711: (Open Elective- IV) Advanced Computing for Civil Engineering**

| Teaching Scheme |            | Examination Scheme |               |
|-----------------|------------|--------------------|---------------|
| Lectures        | 3 Hrs/week | CT – 1             | 15            |
| Tutorials       | -          | CT – 2             | 15            |
| Total Credits   | 3          | TA                 | 10            |
|                 |            | ESE                | 60            |
|                 |            | Duration of ESE    | 02 Hrs 30 Min |

**Course Outcomes (CO)**

Student will be able to

1. apply logic and algorithm for a program to serve a purpose
2. code a program
3. utilize the program to serve a purpose

**Course Contents**

|               | Course Contents                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Hours       |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Unit 1</b> | <b>Computing Fundamentals</b><br>Logic, Iterators, Filters, Nesting, Operators, Binning, List and Insertion Sort, Table and Dictionary, Graph and matrix, Backtracking, Tree, BFS and DFS, Tow-Down and Bottom-Up approaches, decision tree, classification                                                                                                                                                                                                      | <b>(07)</b> |
| <b>Unit 2</b> | <b>Programming Fundamentals</b><br>Data Structures, Conditionals, Iterations and Ranges, Basic Collectors, File Operations, Module System, Graph Algorithm, Divide and Conquer, Abstract Data Types, Dynamic Flow, Network Flow and LLP<br>Java: Class Hierarchy, Inheritance and Overriding, Polymorphism, Cloning, I/O Serialization and Packages, Concurrent Programming, Exception Handling, Generic and call backs.                                         | <b>(07)</b> |
| <b>Unit 3</b> | <b>Applied Statistics</b><br>Introduction, Frequency Distribution, Measures of Central Tendency and Dispersion, Association with 2 variables, Principle of Counting and Factorial, Permutations and Combinations, Probability (Basic, Conditional), Random Variables (Discrete, Continuous, Poisson and Binomial) (Single and Multiple) and its applications, Mass and Density Functions, Expectation and Variance, Estimation and Inference, Hypothesis Testing | <b>(12)</b> |
| <b>Unit 4</b> | <b>Database Management</b><br>Relational Model, Query (and its optimization) and Database Design, Functional Dependency and Normal Forms, Transaction, Hashing and Indexing, Storage management, Back-up and Recovery, Numpy and Basic Panda processing of data, Sorting and Searching                                                                                                                                                                           | <b>(06)</b> |
| <b>Unit 5</b> | <b>Modern Application Development</b><br>Multiple Forms, Backend and Frontend Validation, Access Control - User Authentication and Access without login, Complete Flow and Framework, Web Server, Client-Server Communication (HTTP and DNS), Cloud Computing, Single User Processing, Transaction and User Separation,                                                                                                                                          | <b>(06)</b> |
| <b>Unit 6</b> | <b>Applications</b><br><u>General:</u> Payment Gateway and Accounting, Communication and Collaboration, Database Management, Robust and Lean Systems, Cloud Centralization<br><u>Civil Engineering Specific:</u> PM, BIM, ERP, etc                                                                                                                                                                                                                               | <b>(04)</b> |

**Text Books**

1. Computational Thinking - G. Venkatesh and Mahadevan Mukund (2020)
2. Think Python - Allen B. Downey (O'Reilly, 2015)
3. Fundamentals of Database Management System - MukeshNegi 2019

**Reference Books**

1. Introductory Statistics - Sheldon Ross (3rd Edition - 2010) or newer
2. Learning React: Modern Patterns for Developing React Apps - Alex Banks, Eve Porcello 2020

|                 |            | ESE                | 60            |
|                 |            | Duration of ESE    | 02 Hrs 30 Min |

**Course Outcomes (CO)**

Students will be able to

1. understand the concept and importance of the ground improvement technique
2. identify application areas for different ground improvement techniques
3. select and analyse site specific method of improvement and its design

**Course Contents****Hours**

|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Unit 1</b> | <b>Ground Improvement Mechanical Modification</b><br>Ground Improvement: Definition, Objectives of soil improvement, Classification of ground improvement techniques, Factors to be considered in the selection of the best soil improvement technique.<br>Mechanical Modification: Type of mechanical modification, Aim of modification, compaction, Principle of modification for various types of soils.                                                                                            | <b>(05)</b> |
| <b>Unit 2</b> | <b>Compaction and Dewatering Techniques:</b><br>Engineering properties of the soft, weak and compressible deposits, Natural on land, off-shore and Man-made deposits. Effect of compaction on various soil properties, Drainage techniques - Well points - Vacuum and electro osmotic methods - Seepage analysis for two-dimensional flow-fully and partially penetrating slots in homogenous deposits.                                                                                                | <b>(08)</b> |
| <b>Unit 3</b> | <b>In-situ treatments methods:</b><br>In-situ densification soils, Dynamic compaction and consolidation, Vibro-floatation, Sand pile compaction, Preloading with sand drains and fabric drains, Granular columns, Micro piles, Soil nailing, Ground Anchors, components, load transfer mechanism, rock anchors, anchors in granular soil, anchors in cohesive soil, Rock bolt, types, action of rock bolt, Soil nailing, analysis of nailed soil                                                       | <b>(10)</b> |
| <b>Unit 4</b> | <b>Soil Stabilization:</b><br>Lime stabilization – suitability, process, special effects, criteria for lime stabilization. Criteria for cement stabilization. Stabilization using Fly ash, Electro osmosis, Soil freezing                                                                                                                                                                                                                                                                              | <b>(05)</b> |
| <b>Unit 5</b> | <b>Earth Reinforcement:</b><br>Concept of reinforcement - Types of reinforcement material - Applications of reinforced earth-embankments – use of Geotextiles for filtration, drainage and separation in road and other works. Effect of grouting. Chemicals and materials used. Types of grouting, Grouting procedure. Applications of grouting.<br>Shotcrete                                                                                                                                         | <b>(07)</b> |
| <b>Unit 6</b> | <b>Stability of Slopes and Field Observations:</b><br>General characteristics, Types of failures, Causes of failures, Purpose of stability computation, Investigation of failures, Procedure, Case studies, Stability of Hill side slopes, Open cuts, Engineering problems involving the stability of slopes, Cuts in sand, Homogeneous and soft clay slopes – Sudden spreading of clay slopes, Observation studies during construction, Post construction, piezometers, Settlement plates, Inclinator | <b>(08)</b> |

**Course Outcomes (CO)***Students will be able to*

1. understand and apply concepts of industrial wastewater treatment.
2. analyse and evaluate the industrial wastewater and common effluent treatment systems
3. design the industrial wastewater treatment facilities

|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Unit 1</b> | <b>Introduction:</b> Classification of industries, general water requirements in industry, industrial water reuse, cooling tower make up water, water and salt balances in cooling tower, Common water quality problems in cooling water tower systems, estimation of blow down water composition, analysis of scaling potential by Langlier and Ryzner indexes                                                                                                                                                                                                                                                 | <b>(04)</b> |
| <b>Unit 2</b> | <b>Waste minimization techniques:</b> waste audit, concept of waste minimization, techniques of volume and strength reduction, Equalization: process, flow and quality, location, volume requirement, design considerations, reuse and recycling concepts, process description, objectives, and methods of neutralization and proportioning                                                                                                                                                                                                                                                                     | <b>(05)</b> |
| <b>Unit 3</b> | <b>Industrial Wastewater Treatment for Agro based industries:</b> Manufacturing processes, water usage, sources, quantities, and characteristics of effluents (process stream and combined), pollution effects, waste reduction / reclamation / by-product recovery, utilization, alternative methods of treatment, and disposal for<br>i) Agro-based industries: Sugar, Distillery, Dairy, Pulp and paper mill, Textile                                                                                                                                                                                        | <b>(10)</b> |
| <b>Unit 4</b> | <b>Industrial Wastewater Treatment for Chemical and Engineering Industries:</b> Manufacturing processes, water usage, sources, quantities, and characteristics of effluents (process stream and combined), pollution effects, waste reduction / reclamation / by-product recovery, utilization, alternative methods of treatment, and disposal for<br>1. Chemical industries: Pharmaceutical, Petroleum and refineries, Fertilizer and Tannery<br>2. Engineering industries: Steel, Electroplating, Foundries, Sponge iron unit, Alumina/aluminum manufacturing unit, Copper smelter<br>3. Thermal power plants | <b>(10)</b> |
| <b>Unit 5</b> | <b>Common Effluent Treatment Plant:</b> concept, objectives, methodology, cost benefit analysis, design, operation and maintenance                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>(03)</b> |
| <b>Unit 6</b> | <b>Industrial Project Report:</b> Project report preparation for waste treatment and disposal system of industries, Pre-feasibility, feasibility and detailed project reports, project financial appraisal.                                                                                                                                                                                                                                                                                                                                                                                                     | <b>(04)</b> |

## Assessment Pattern (with revised Bloom's Taxonomy)

| Knowledge Level | CT 1 | CT 2 | TA | ESE |
|-----------------|------|------|----|-----|
| Remember        | 2    | 2    | 2  | 10  |
| Understand      | 2    | 2    | 2  | 10  |
| Apply           | 7    | 7    | 2  | 14  |
| Analyse         | 2    | 2    | 2  | 16  |
| Evaluate        | 2    | 2    | 2  | 10  |
| Create          |      |      |    |     |
| TOTAL           | 15   | 15   | 10 | 60  |

**Government College of Engineering, Karad**

**Final Year (Sem – VII) B. Tech. Civil Engineering**

**CE2713: (Elective IV) Earthquake Resistant Design of Structures**

| Teaching Scheme |            | Examination Scheme |               |
|-----------------|------------|--------------------|---------------|
| Lectures        | 3 Hrs/week | CT – 1             | 15            |
| Tutorials       | -          | CT – 2             | 15            |
| Total Credits   | 3          | TA                 | 10            |
|                 |            | ESE                | 60            |
|                 |            | Duration of ESE    | 03 Hrs 00 Min |

**Course Outcomes (CO)**

Students will be able to

- recall and summarize basic geological concepts & fundamentals of earthquake engineering
- relate knowledge to solve problems in structural analyse and material testing.
- predict response of structure and do detailing as per standard IS codes.
- choose appropriate earthquake resistant system for the structure.

**Course Contents**

|               |                                                                                                                                                                                                                                                                                                                                          | <b>Hours</b> |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <b>Unit 1</b> | <b>Elements of Seismology:</b> Terminology, structure of earth, causes of an earthquake, plate tectonic theory, continental drift theory, elastic rebound theory, seismic waves, magnitude and intensity, methods of measurement, energy released, seismograph, strong motion earthquakes, accelerogram, prominent earthquakes in India. | <b>(05)</b>  |
| <b>Unit 2</b> | <b>Fundamentals of Theory of Vibrations:</b> Free and forced vibrations of single degree of freedom systems (SDOF). Undamped and viscously damped vibrations, equations of motion and solutions. General dynamic loading, Duhamel Integral, earthquake response of SDOF system                                                           | <b>(08)</b>  |
| <b>Unit 3</b> | <b>Response Spectrum Theory:</b> Earthquake response spectrum, tripartite spectrum, construction of design response spectrum, effect of foundation soil and structural damping on design spectrum, evaluation of lateral loads due to earthquake on multistory buildings as per IS 1893-2002 Part I.                                     | <b>(07)</b>  |
| <b>Unit 4</b> | <b>Conceptual design:</b> Planning aspect, load path, stiffness and strength distribution, different structural system, liquefaction and settlement<br><b>Earthquake resistant design principles:</b> Design philosophy, behaviour of RC building, ductility and ductile detailing of beam and columns using IS 13920.                   | <b>(10)</b>  |
| <b>Unit 5</b> | <b>Masonry Structures:</b> Behaviour of unreinforced masonry and reinforced masonry, RC bands, vertical reinforcement, openings, Provisions of IS 4326. Repair and strengthening of masonry and RC members.                                                                                                                              | <b>(04)</b>  |
| <b>Unit 6</b> | <b>Introduction to Earthquake resistant modern techniques:</b> Base Isolation-Elastomeric, sliding, combined.<br><b>Seismic dampers:</b> Friction dampers, Tuned mass damper (TMD), Visco-elastic dampers.                                                                                                                               | <b>(06)</b>  |

**Note:** Only IS 1893 Part I is allowed in examination.

|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Unit 1</b> | <b>General aspects:</b> - Definitions: - Tunnel, open cut, advantages and disadvantages of tunnels and open cuts. History and development in tunnel construction. Economics of tunnelling, selection of alignment of tunnel. Classification of tunnels and tunnel approaches. Introduction to under water tunnelling.                                                                                                                                                                                                                                                                                                                     | <b>(05)</b> |
| <b>Unit 2</b> | <b>Stages in tunnel construction:</b> -Investigations: - i) Investigation before planning ii) Investigation at the time of planning iii) Investigation at the time of construction.<br>Setting out of tunnel, excavation, blasting, design of shape and size: - i) D section ii) Circular section, rectangular section iii) Horseshoe form.<br>Methods of tunnelling (soft rock / soil): - i) Folding method ii) Needle beam method.                                                                                                                                                                                                      | <b>(06)</b> |
| <b>Unit 3</b> | <b>Tunnelling in water bearing soils:</b> -Introduction, well points system.<br>Equipment with plenum process of tunnelling or compressed air method: -i) Bulkhead ii) Airlock iii) Types of air lock.                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>(05)</b> |
| <b>Unit 4</b> | <b>Tunnelling in Hard rocks:</b> -Introduction, sequence of operations and phases of operations for tunnelling in rock.<br>Methods of tunnelling in rock:- i) Drift method ii) Heading and bench method iii) Full face method<br>Mucking:-Introduction to mucking, mucking in a steep grade tunnelling. Hauling, drilling, drill hole patterns.<br>Explosives: -PENT (Penta Enythrital), TNT (Tri-Nitro-Toluene), RDX (Rapid Detonating Explosive), Safety precautions in rock tunnelling.<br><b>Tunnelling in soft rocks:-</b> Fore poling method, needle beam method, shield method and its sequence of operation, merits and demerits. | <b>(06)</b> |
| <b>Unit 5</b> | <b>The new Austrian tunnelling method (NATM) And tunnel boring machine:</b> -Introduction, NATM concept. Main features of NATM, Rock bolting.<br>Tunnel boring machine: - Introduction, types of tunnel boring machine i) slurry machine, ii) earth pressure balance machine rock machine (introduction only). Introduction to urban tunnelling and near-surface tunnelling                                                                                                                                                                                                                                                               | <b>(08)</b> |
| <b>Unit 6</b> | <b>Tunnel maintenance:</b> -Tunnelling: -Necessity, materials required, sequence of tunnel lining.<br>Drainage of tunnels: -Introduction, free drainage, dewatering, permanent drainage.<br>Tunnel ventilation: -Temporary ventilation, dust prevention, lighting, and permanent drainage.<br>Health protection in tunnels: -Safety measures, health protection: -Silicosis, caisson disease.                                                                                                                                                                                                                                             | <b>(07)</b> |

**Course Outcomes (CO)**

**Student will be able to**

- Expose concepts of sustainability in the context of building and conventional engineered building materials.
- Understand energy and resources consumption and its applications.
- Knowledge of Energy and resources balance concept.
- Aware of various green building councils (OTTY), (LEED), (GRIHA) and (IGBC).

**Course Contents**

|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <b>Unit 1</b> | <b>Introduction to sustainability and green building:</b> Introduction to sustainable materials and the concept of green building, comparison between conventional building and green building, Embodied energy and Operational energy in Building and Life cycle energy. Ecological footprint, Bio- capacity and calculators of planet equivalent.                                                                                                                                                 | <b>(06)</b>  |
| <b>Unit 2</b> | <b>Sustainable materials:</b> Role of Material: Cements and cementitious material, Alternative fuel for cements for reduction in carbon emission. Sustainability issues for concrete. Role of quality, minimization of natural resource utilization, High volume fly ash concrete, geo-polymer concrete etc. concrete with alternative material for sustainability and introduction to concept of carbon minimization.                                                                              | <b>(07)</b>  |
| <b>Unit 3</b> | <b>Energy Audit and resources consumption:</b> Stages in energy programme, surveying the building, Measurement and Model analysis, Audit report, Reduction in water consumption in concrete Recycled aggregate, Energy for grinding and crushing of cement, aggregate etc. and reduction. Operational energy in building role of materials and thermal conductivity Clay Bricks, Types of kilns, Comparative energy performance emission performance and financial performance, Indoor air quality. | <b>(07)</b>  |
| <b>Unit 4</b> | <b>Operational energy consumption:</b> Paints, Adhesive and sealants for use in building Volatile organic content (VOC) emission issues and indoor air quality for Sustainability and Health hazard. Operational energy reduction and net zero building Optimization for design of building for energy efficiency and example of optimization through use of Evolutionary genetic algorithm.                                                                                                        | <b>(07)</b>  |
| <b>Unit 5</b> | <b>Energy and resources balance:</b> Radiation budget, Surface water balance, Effects of trees and microclimatic modification through greening. Use of Building Integrated Photo Voltaic (BIPV) and other renewable energy in buildings, basic concepts and efficiency.                                                                                                                                                                                                                             | <b>(06)</b>  |
| <b>Unit 6</b> | <b>Energy codes:</b> ECBC requirement, Concepts of Overall Thermal Transfer Value (OTTY), Green Performance rating, requirements of Leadership in Energy and Environmental Design (LEED), Green Rating for Integrated Habitat Assessment (GRIHA) and Indian Green Building Council (IGBC).                                                                                                                                                                                                          | <b>(07)</b>  |

|                 |            | Duration of ESE    | 02 Hrs 30 Min |

**Course Outcomes (COs)**

## Students will be able to

1. understand elements of solid waste management.
2. apply the elements of solid waste management and analyse collection, transportation, processing and disposal systems.
3. design of processing and disposal system for effective solid waste management

**Course Outcomes (CO)**

Students will be able to

1. identify types of offshore structures and various environmental loads acting on offshore structures.
2. understand use of different materials for marine applications.
3. evaluate forces on coastal structures and coastal erosion protection measures.
4. apply knowledge coastal Engineering in inspection and testing of ocean structures.

**Course Contents**

|               |                                                                                                                                                                                                                                                                                                                                                                                    | Hours |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| <b>Unit 1</b> | <b>Offshore structures:</b> Different types, Various structural systems deployed for shallow, medium, deep and ultra-deep waters, Various environmental loads acting on offshore structures, Different types of coastal structures, Brief introduction to design of offshore structures, Foundation systems for ocean structures, Sea bed anchors, Dredging methods and equipment. | (7)   |
| <b>Unit 2</b> | <b>Materials for marine applications:</b> Types of materials and their applications in marine environment, Properties and selection of materials for marine environment, Corrosion and corrosion protection methods, Introduction to composites for marine environment, Codes of practice for materials in marine environment.                                                     | (6)   |
| <b>Unit 3</b> | <b>Wave deformation :</b> zonation based on behaviour of waves, causes of wave deformation, important wave deformation phenomenon, refraction, diffraction and reflection of wave<br><b>Geo-synthetics :</b> types and applications, Breakwaters, selection of breakwater type, types and advantages, break water alignment                                                        | (6)   |
| <b>Unit 4</b> | <b>Sediment characteristics :</b> long shore sediment transport, Radiation stresses<br><b>Forces on coastal structures :</b> Non-breaking wave forces<br><b>Scour under marine structure :</b> Importance of scour, characteristics, Scour due to steady current                                                                                                                   | (7)   |
| <b>Unit 5</b> | <b>Coastal erosion protection measures :</b> Mechanics of sediment transport, coastal sediment budget, causes of erosion, controlling measures, protection works types, gryones, sea walls, offshore breakwaters, physical factors needed for selection, coastal defence, artificial nourishment - planning of coast protection works, Case studies.                               | (7)   |
| <b>Unit 6</b> | <b>Inspection and testing of ocean structures,</b> Introduction to Non-destructive testing, Repair and rehabilitation of marine structures, Planning guidelines for maintenance of ocean structures, Structural health monitoring of ocean structures                                                                                                                              | (7)   |

|                 |            | Duration of ESE    | 03 Hrs 00 Min |

**Course Outcomes (CO)**

Students will be able to

1. understand and apply laws and principles related to different design methodologies and philosophies under loading and standard codes.
2. apply appropriate design methods to design different structures according to standard codes.
3. evaluate values of reactive parameters in structures under different loading conditions.
4. predict behaviour of structures and make necessary inferences according to design.

**Course Contents**

|               |                                                                                                                                                                                                                                                                                                                                                                      | Hours       |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Unit 1</b> | <b>Limit State of Collapse:</b> torsion behavior of R.C. rectangular sections subjected to torsion, design of sections subjected to combined bending and torsion, combined shear and torsion                                                                                                                                                                         | <b>(07)</b> |
| <b>Unit 2</b> | Limit state design of two span continuous beams and three span continuous beams using is coefficient, concept of moment redistribution                                                                                                                                                                                                                               | <b>(08)</b> |
| <b>Unit 3</b> | <b>Design of water tank:</b> Introduction to working stress method for water tank design, design criteria, permissible stresses, design of water tank resting on ground using IS code method – (i) circular water tanks with flexible and rigid joint between wall and floor, (ii) rectangular water tanks, introduction to limit state method (LSM), IS 3370 (2009) | <b>(09)</b> |
| <b>Unit 4</b> | Basic concepts of pre-stressing, historical development, types and systems of pre-stressing, losses of pre-stress in pre tensioned and post tensioned member, flexural strength of pre-stressed concrete sections, introduction to end blocks                                                                                                                        | <b>(08)</b> |
| <b>Unit 5</b> | Analysis of pre-stressed rectangular and symmetrical I sections, different cable profiles                                                                                                                                                                                                                                                                            | <b>(06)</b> |
| <b>Unit 6</b> | <b>Design of pre-stressed concrete:</b> rectangular and Symmetrical I sections for following criteria: (i) Design of section for flexure<br>(ii) Design of section for the limit state of collapse in flexure.                                                                                                                                                       | <b>(08)</b> |

|                 |             | Duration of ESE    | 02 Hrs 30 Min |

**Course Outcomes (CO)**

Students will be able to

1. explain basics of reservoir, gravity dam, earthen dam, spillway, canal, river training work and water power.
2. apply knowledge of hydraulic structure to solve or analyze the problem associated with.
3. design hydraulic structures in irrigation engineering

**Course Contents**

**Hours**

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |             |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Unit 1</b> | <b>Dams and Reservoirs:</b> Types of dams, selection of site for dams, selection of type of dam, Storage Calculations using mass curves, Area elevation curve & Elevation capacity curve, Control levels, Silting of reservoirs, Control of Losses in reservoirs, Classification of Dams                                                                                                                                                                                                                                                                                                                           | <b>(06)</b> |
| <b>Unit 2</b> | <b>Earthen Dams:</b> Types of earthen dams, Components and their functions, methods of construction of earthen dam, Design criterion, plotting of phreatic line, Modes of failure, seepage control measures- Drainage & filters, stability of slopes for sudden drawdown & steady seepage, Rock fill dams<br><b>Gravity Dams:</b> Forces acting on dam, Design Criterion-theoretical and practical profile, high and low dam, fixing section of dam, stability analysis, and methods of construction, galleries and joints in dams. Arch dams- Introduction & types only. Introduction to instrumentation in dams. | <b>(08)</b> |
| <b>Unit 3</b> | <b>Spillway:</b> Necessity and function components of spillway, different types, factors affecting choice of type of spillway. Elementary hydraulic design, types of energy dissipation arrangements, gates for spillway.<br>Hydrodynamics of water- Gradually varied flow(GVF),Rapidly varied flow(RVF)<br><b>Outlets in Dams:</b> Outlets through concrete and earth dams, different types.                                                                                                                                                                                                                      | <b>(07)</b> |
| <b>Unit 4</b> | <b>Diversion Head Works:</b> Component parts & their functions, types of weir and barrages, K T Weir, Causes of failure and remedies, Introduction to Theory of seepage-Bligh’s creep theory, critical exit gradient, Khosla’s theory                                                                                                                                                                                                                                                                                                                                                                              | <b>(06)</b> |
| <b>Unit 5</b> | <b>Canals:</b> Types, alignment, typical sections of canals, balancing depth Kennedy’s and Lacey’s silt theories, canal lining-purpose, types, selection and economics.<br>Lift Irrigation method<br><b>C.D. Works:</b> Necessity, Types, Canal Regulatory Works: head regulator, cross regulator, canal fall, canal escape, standing wave flume.                                                                                                                                                                                                                                                                  | <b>(07)</b> |
| <b>Unit 6</b> | <b>River Engineering:</b> Classification and types of river, meandering phenomenon<br><b>River Training Works:</b> Classification-Marginal bunds, Guide banks and Groynes. River navigation. Interlinking of rivers, National perspective plan<br>Methods of discharge measurement, water discharge rating curves<br>Floods Management as changing risk, flood and ecosystem<br><b>Elements of Hydro-power Structures:</b> Hydro-power structures and its importance, typical layout & functions of components parts-Intakes, conveyance system, surge tanks, Power house, Tail race, Types of hydro-power plants. | <b>(08)</b> |

| <b>TOTAL</b>    | <b>25</b> | <b>25</b> |

**Government College of Engineering, Karad**

**Final Year (Sem – VII) B. Tech Civil Engineering**

**CE 2710: Industrial Training**

| Teaching Scheme |            | Examination Scheme |           |
|-----------------|------------|--------------------|-----------|
| Tutorial        | 01 Hr/week | CA                 | 50        |
| Total Credits   | 01         | <b>TOTAL</b>       | <b>50</b> |

**Course Outcomes (CO)**

*Students will*

1. possess work responsibly and ethics in their working environment.
2. get trained in construction site related activities, communication and will get basics of site knowledge.
3. study field practices and legal documentation in Civil Engineering.
4. apply the theoretical knowledge for solving industrial/field challenges.

**COURSE CONTENTS**

Students need to choose the right area of Civil Engineering out of following discipline,

1. Construction Work.
2. Planning and Design.
3. Quantity Estimation.
4. Survey.
5. Investigations.
6. Management.

They must approach the respective authority/company through proper communication channel to obtain the permission from the authority/company and undergo field training to achieve course learning outcomes.

**PERIOD OF ACTIVITY**

The period of activity must be after Semester VI (Third Year B. Tech, Civil Engineering) and in summer vacation. The student has to devote 90-100 man-hours (@ 20 days) distributed over the vacations since completion of Third Year B. Tech, Civil Engineering Program.

**REPORTING AND SUBMISSION REQUIREMENT**

At the start of semester VII<sup>th</sup>, the student must submit a report to mentor; based on the area they have completed for the course fulfilment. The report must be attached with certificate from appropriate authority/company, actual photographs, videos and day wise field notes. The field notes may consist of

1. Communication Records.
2. Log of Activities.
3. Work Specifications.
4. Analysis of Material.
5. Laboratories and Cost Requirements.
6. Details of billing system.
7. Regular Reporting to Mentor.
8. Certificate from Company/Organization/Firm Stating Attendance, Satisfactory Completion of Work Assigned.
9. Feedback by Employer.
10. Report Consisting of Introduction.
11. Study/Work Carried Out.
12. Observations and Outcomes.

**ASSESSMENT PATTERN FOR CA/TA**

Student must submit finalised report at the end of the semester (VII).  
Students have to present his/her work to panel of internal examiner for evaluation of CA/TA as per rubrics.

|                 |            | Duration of ESE    | 02 Hrs 30 Min |

**Course Outcomes (CO)**

Students will be able to

1. understand and apply the knowledge of tectonic activities in Deccan traps.
2. acquire and apply knowledge of the preliminary geological investigations for civil engineering projects
3. develop skills to apply geophysical methods for geological investigation of civil engineering sites.

|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Unit 1</b> | <b>Plate Tectonics and Seismicity</b><br>Introduction to the concept of plate tectonics collective explanation of seismic activity, volcanism and continental drift by plate tectonics. Lineaments: types, civil engineering significance. seismic zones of India, seismic activity of Deccan trap region, Reservoir Induced Seismicity (RIS), Tectonic nature of seismic activity of Deccan trap region                                                                                                                                                                                                                                                                           | <b>(06)</b> |
| <b>Unit 2</b> | <b>Groundwater in Relation to Engineering Works.</b><br>Aquifer parameters, water bearing capacity of common rocks, Darcy’s law, cone of depression and its significance in civil engineering, saline water intrusions: control and prevention. Systematic groundwater investigation. Occurrence of groundwater in Deccan trap region.<br>Water Pumping Tests: approach and utility, influence of subsurface water in engineering constructions, case study on ground water problems and its solution                                                                                                                                                                              | <b>(06)</b> |
| <b>Unit 3</b> | <b>Application of Rock Mechanics in Engineering</b><br>Introduction, relevance of rock mechanics in evaluating rock and rock mass properties, measurement of strength of intact rock, elastic properties of rocks, measurement of stress in underground rocks, estimation of rock mass properties, introduction to basalt fibre.                                                                                                                                                                                                                                                                                                                                                   | <b>(06)</b> |
| <b>Unit 4</b> | <b>Site Investigation</b><br>Introduction, different stages of site investigation, aerial photography interpretation and satellite remote sensing, geophysical exploration, subsoil exploration and sampling of soils, methods of subsoil exploration, exploratory drilling in rocks. Engineering consideration of structural features                                                                                                                                                                                                                                                                                                                                             | <b>(06)</b> |
| <b>Unit 5</b> | <b>Engineering Geology considerations for:</b><br><b>Dam:</b> Influence of geomorphology and geology in the design of a dam, adverse effects of faults in dam Foundation and its treatment, causative factors of dam disasters, Preliminary investigation and selection of a dam site<br><b>Tunnel:</b> Geological hazards in tunneling<br><b>Bridge:</b> Supports and foundations of bridges, different aspects of engineering geological investigation of a bridge site, locating a bridge at different reaches of a river, bridge sites in alluvial plains, bridge foundation in subsoil in relation to depth of scouring, case studies on bridges including a collapsed bridge | <b>(08)</b> |
| <b>Unit 6</b> | <b>Natural Hazard: Landslide</b><br>Introduction, hazards of landslides, landslide type: classification and description, causes of landslides, investigation of areas affected by landslides and slide-prone areas, Landslide Hazard Zonation mapping, Landslide Hazard Mitigation, concept of Glacial Lake Outburst Flood (GLOF), instances of major landslides in India, case study on landslides in India in recent past                                                                                                                                                                                                                                                        | <b>(07)</b> |

|                 |            | Duration of ESE    | 02 Hrs 30 Min |

**Course Outcomes (CO)**

At the end of course students will able to

1. identify traffic characteristics and its components, factors affecting road traffic.
2. understand traffic movements and speed studies.
3. perform various types of traffic surveys, data collection, analysis, inference and presentation
4. evaluate various modes of Mass Transportation like Bus and Rail and its Planning and Management

**Course Contents**

|               | Course Contents                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Hours      |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Unit 1</b> | Traffic Characteristics Traffic characteristics –Road user characteristics, General human characteristics, Physical characteristics. Vision eye – Movement peripheral vision, Visual attention, Visual sensitivity to light and colour, glare vision and recovery perception of space. Hearing, Stability sensation,                                                                                                                                                                                                                                                                 | <b>(6)</b> |
| <b>Unit 2</b> | Time factor in response, Theory of PIEV modifying factors, conditional responses; Vehicular Characteristics –types, dimensions, resistance, power requirement for different resistance, change in direction –minimum turning radius, off tracking, slip angle                                                                                                                                                                                                                                                                                                                        | <b>(6)</b> |
| <b>Unit 3</b> | Traffic Engineering & Speed Analysis Introduction, Speed studies, journey time and delay studies, Sampling in traffic studies & application, Traffic surveys-types of volume count Planning, Problems on PCU, moving observer method and spot speed. Traffic operation and management. Traffic systems management and Travel demand management –Congestion Management Cost effective management measures, Traffic control aids, Street furniture, Road Arboriculture–Traffic Regulation, Traffic Sign and Road marking                                                               | <b>(8)</b> |
| <b>Unit 4</b> | Trip Generation and Distribution: Factors governing trip generation and attraction –Application of Regression Analysis-Methods of trip distribution; Growth and Synthetic Models Calibration and Application of gravity model.-Category analysis                                                                                                                                                                                                                                                                                                                                     | <b>(6)</b> |
| <b>Unit 5</b> | Introduction to Intelligent Transportation Systems (ITS) Definition, Objectives, Historical Background, Benefits of ITS -ITS Data collection techniques –Detectors, Automatic vehicle location (AVL), Automatic Vehicle Identification (AVI), Geographic Information Systems (GIS), Video data collection. Advanced traffic management systems (ATMS), Advanced traveller information Systems (ATIS), Commercial vehicle operations (CVO), Advanced vehicle control systems (AVCS), Advanced Public transportation systems (APTS), and Advanced rural transportation systems (ARTS). | <b>(7)</b> |
| <b>Unit 6</b> | Public Transport System History and role of Transit, Transit system and transit mode characteristics, Transportation technology Vision–2020, Role of various modes of Mass Transport and their Impact, Indian condition Bus Rapid Transit Systems (BRTS)-Rapid transit rail-Metro & Mono rails                                                                                                                                                                                                                                                                                       | <b>(7)</b> |

**Course Outcomes (CO)**

Student will be able to

1. understand and apply design loads in analysis of bridges as per load classes given in IRC.
2. apply design considerations of various components of bridges.
3. compare and apply various techniques used in the construction of bridges.
4. select, analyse and design different types of bridge bearings.

**Course Outcomes (CO)**

Student will be able to:

- learn analysis and design of different types of RC structures.
- understand behaviour of special RC structures under various loads and load combinations.
- carryout design and detailing of reinforcement in special RC structures.
- learn application of different IS code specifications for design of R C structures.

**Course Contents**

|               | Course Contents                                                                                                                                                                   | Hours       |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Unit 1</b> | Design of Flat Slabs: analysis and design of flat slab, Direct design method, Equivalent frame method, detailing of reinforcement as per Codal provisions.                        | <b>(07)</b> |
| <b>Unit 2</b> | Analysis of Deep Beams: design of simply supported and continuous deep beam as per Codal provision,                                                                               | <b>(06)</b> |
| <b>Unit 3</b> | Design of Chimney: analysis of stresses in RCC chimney- uncracked and cracked sections, Codal provisions, design of chimney.                                                      | <b>(07)</b> |
| <b>Unit 4</b> | Design of Overhead Water Tanks: rectangular and circular water tank with flat bottom, rectangular and circular base slab, flat and dome shaped tank roof, design based on IS 3370 | <b>(07)</b> |
| <b>Unit 5</b> | Shear walls : Types of shear walls, analysis and Design, ductile detailing of shear wall as per codes.                                                                            | <b>(07)</b> |
| <b>Unit 6</b> | Yield line analysis of slabs: virtual work and equilibrium method of analysis, design of simply supported rectangular slabs                                                       | <b>(06)</b> |

**Tutorials: Assignment on each unit is to be solved and submitted by the student**

| <p>The project may be a design project, experimental project, field surveying or computer oriented on any of the topics of civil engineering interest. Project group consists of a minimum THREE and maximum FIVE students. The group is required to do literature survey, formulate the problem, propose and execute methodology.</p> <p>Students will prepare a technical report in prescribed format based on their work.</p> <p>The assessment of the project will be done at the end of the semester by a committee consisting of three faculty members from the department along with Project Guide. The students will present their project work before the committee. The presentation of the project shall be of 45min followed by viva voce.</p> <p>The project guide will award the marks to the individual students depending on the group average awarded by the committee.</p> <p>One Project Guide shall be allotted maximum TWO groups for guidance. Each group will submit the copies of the completed project report. One copy will be kept in the departmental library.</p> |                                                                       |  |                            |

- |   |                                                                                       |
|---|---------------------------------------------------------------------------------------|
| 1 | decide which profession of the industry would be better as a career option to pursue. |
| 2 | acquire practical experience in an organizational setting.                            |
| 3 | develop communication and teamwork skills.                                            |
| 4 | create network and social circle and develop relationships with industry people.      |

**Course Contents**

The general procedure for arranging internship is given below:

- Request Letter/ Email from students / college. Students request letter/profile/ interest areas may be submitted to industries for their willingness for providing the training.
- Industry will confirm the training and the number of seats allocated for internships via Confirmation Letter/ Email. In case the students arrange the training themselves the confirmation letter will be submitted by the students in the office of Training & Placement through concerned department. Based on the number of vacancies agreed to by the Industry, Head / TPO will allocate the students to the Industry. In addition, the internship slots may be conveyed through Telephonic or Written Communication (by Fax, Email, etc.) by the Head / TPO or other members of the T&P cell / Faculty members who are particularly looking after the Final/Summer Internship of the students.
- Students on joining Training at the concerned Industry / Organization, submit the Joining Report/ Letters / Email.
- Students undergo industrial training at the concerned Industry / Organization. In-between Faculty Member(s) evaluate(s) the performance of students once/twice by visiting the Industry/Organization and Evaluation Report of the students is submitted in department office/TPO with the consent of Industry persons/ Trainers.
- Students will submit training report after completion of internship.
- Training Certificate to be obtained from industry.

**Internship Company Norms:**

Company where students intend to do internship should be

- Should be registered company
- Preferably be ready to have MoU with GCE Karad
- Should communicate institute about selection and period of internship.
- Should allow GCEK teachers / mentors to visit company for performance evaluation and discussion
- Should share student's attendance while in internship
- Should allow students to visit institute once in month or agreed by Head of Department.

|--------------|------|------|------|------|------|------|------|------|------|-------|-------|-------|-------|-------|
| CO 1         | -    | 1    | 1    | 1    | 3    | 2    | 2    | 1    | 3    | 2     | 3     | 3     | 1     | 3     |
| CO 2         | 2    | 3    | 3    | 3    | 3    | 3    | 3    | 1    | 3    | 2     | 3     | 3     | 2     | 3     |
| CO 3         | 3    | 3    | 2    | 3    | 3    | 3    | 3    | 3    | 3    | 1     | 3     | 3     | 2     | 3     |
| CO 4         | 1    | -    | 1    | -    | 3    | 1    | 1    | 1    | 3    | 3     | 3     | 3     | 2     | 3     |

**Assessment Pattern (with revised Bloom's Taxonomy)**

| Knowledge Level | CA  | ESE |
|-----------------|-----|-----|
| Remember        | 36  | 36  |
| Understand      | 36  | 36  |
| Apply           | 36  | 36  |
| Analyse         | 36  | 36  |
| Evaluate        | 36  | 36  |
| Create          | 20  | 20  |
| TOTAL           | 200 | 200 |
