

GOVERNMENT COLLEGE OF ENGINEERING KARAD

(An Autonomous Institute of Government of Maharashtra)

DEPARTMENT OF MECHANICAL ENGINEERING

CURRICULA FOR
FIRST YEAR B.TECH MECHANICAL ENGINEERING
AS PER NEP-2020

W.E.F
AY 2023-24

Professor and Head of the
Dept. of Mechanical Engineering
Govt. College of Engineering, KARAD

FY B.TECH MECHANICAL ENGINEERING

COURSE SYLLABI

FOR

SEMESTER I

Professor and Head of the
Dept. of Mechanical Engineering
Govt. College of Engineering, KARAD

Government College of Engineering, Karad

First Year (Sem – I) B. Tech. Mechanical Engineering

ME3101: Applied Mathematics I

Teaching Scheme		Examination Scheme		
Lectures	03 Hrs/week	MSE		20
Tutorials	01 Hrs/week	ISE		20
Total Credits	04	ESE		60
		Duration of ESE		02 Hrs 30 Min

Course Outcomes: After completion of the course the student will be able to

- CO1 Utilize concept of linear algebra for implementing Engineering domain problems.
- CO2 Separate real and imaginary parts of Hyperbolic functions and logarithms of complex number.
- CO3 Deal with functions of several variables, Jacobian and their applications.
- CO4 Apply vector calculus for Engineering applications.

	Course Contents	CO	Hours
Unit 1	Solution of System of simultaneous linear equations: Rank of a matrix, Rank using normal & Echelon form, System of linear equations; consistency of homogeneous & nonhomogeneous systems, Linear dependence and independence of vectors.	CO1	(7)
Unit 2	Eigen Values and Eigen Vectors: Eigen values and Eigen vectors and their properties, Cayley-Hamilton Theorem (without proof), powers of matrix, diagonalization of matrices.	CO1	(7)
Unit 3	Complex Numbers: Demoivre's theorem, Circular functions, Hyperbolic and Inverse Hyperbolic functions, logarithms of complex number, separation into real and imaginary parts of a complex number.	CO2	(7)
Unit 4	Partial Differentiation: Partial derivatives, Homogeneous functions and Euler's theorem, Composite function, total derivative, Applications to partial differentiation; Errors and Approximations	CO3	(7)
Unit 5	Jacobian: Properties, Jacobian of implicit function, partial derivatives of implicit function using jacobian.	CO3	(7)
Unit 6	Vector Calculus: Velocity and acceleration: Tangential and normal components of acceleration, Scalar and vector point functions, Gradient of scalar point function, Directional Derivatives, Curl and Divergence of vector point functions. Solenoidal and irrotational force fields.	CO4	(7)

Tutorials: Following is tentative list of tutorials to be conducted in the tutorial class based on-

- Rank, consistency of system of equations.
- Linear dependence, independence of vectors.
- Eigen values and Eigen vectors.
- Powers of matrix and Diagonalization of matrices.
- Separation into real and imaginary part of hyperbolic and logarithmic function.
- Direct differentiation and Euler's theorem.
- Composite function and total derivative.
- Errors and Approximations.
- Jacobian of implicit function.
- Directional Derivatives, Curl and Divergence of vector point function.

Professor and Head of the
Dept. of Mechanical Engineering
Govt. College of Engineering, KARAD

First Year (Sem – I) B. Tech. Mechanical Engineering					
ME3102: Applied Physics					
Teaching Scheme			Examination Scheme		
Lectures	03 Hrs/Week		MSE	20	
Tutorials	00 Hrs/Week		ISE	20	
Total Credits	03		ESE	60	
			Duration of ESE	02:30 Hrs	
Course Outcomes :					
After completion of course the Students will be able to					
CO1.	Explain concepts of Crystal Structure, Quantum Physics, light for Engineering.				
CO2.	Understand physical significance and fundamental properties of crystal, light, sound, acoustics and NDT				
CO3.	Demonstrate applications of different physical phenomena in engineering and technology.				
CO4.	Compute required physical quantity from given data.				
	Course Contents			CO	Hrs
Unit 1	The structure of Crystalline Solids / Solid State Physics: Introduction (Lattice point, Space lattice, Basis, Crystalline solid), Unit cell- Primitive and non- primitive, Lattice parameters, Bravais Lattice (Seven crystal systems), Miller indices, Characteristics and examples, inter planer distance and their examples, relation between density and lattice constant, with examples, Bragg’s law and spectrometer, Determination of crystal structures with X-ray diffraction spectrometer and examples.			CO1, CO2C O3	(06)
Unit 2	Wave optics Interference of light, Newton’s rings, Examples, Farunhofer’s diffraction from a single slit, Rayleigh criterion; Diffraction gratings and its theory, Wavelength of spectral lines, resolving power, Examples, Double Refraction, Positive and Negative crystal, Optical activity, Specific Rotation, Half Shade Polarimeter and their Examples.			CO1, CO2C O3	(07)
Unit 3	LASER Introduction, Characteristics of LASER beam, Absorption, Spontaneous Emission, Stimulated Emission, Population Inversion, Types of pumping agent, Components of LASER, Lasing action, Solid-state lasers (ruby), Diode Laser, Applications of LASER in science and engineering, Holography Techniques.			CO2, CO3, CO4	(07)
Unit 4	Acoustics and Ultrasonic Acoustics: Architectural Acoustics, Reverberation Time, Absorption, Sabine’s formula, Conditions and Remedies for good acoustics, Method of design for good Acoustics problems. Ultrasonic waves: Ultrasonic waves, Characteristics of Ultrasonic waves, Magnetostriction oscillator and Piezoelectric Oscillator, Applications. Problems			CO2, CO3, CO4	(06)
Unit 5	Quantum Physics: Introduction to Quantum mechanics, Wave Particles Duality, De-Broglie waves, Properties of Matter wave, Physical significance of wave function, Heisenberg Uncertainty principle for position and momentum of particle, Compton Effect and Photoelectric Effect and their examples.			CO1, CO2	(06)
Unit 6	Non-destructive testing: Types of defect, Method of NDT, Visual Inspection, Liquid/Dye penetrant Testing, Magnetic particle testing, Eddy current testing, Ultrasonic inspection testing, x-ray radiography, Advantages.			CO2, CO3, CO4	(08)

First Year (Sem –I) B. Tech. Mechanical Engineering					
ME3103: Basic Mechanical Engineering					
Teaching Scheme			Examination Scheme		
Lectures	03 Hrs/week		MSE	20	
Tutorials	00 Hrs/week		ISE	20	
Total Credits	03		ESE	60	
			Duration of ESE	02 Hrs 30 Min	
Course Outcomes (CO):					
Students will be able to					
1	Explain thermodynamic laws, basics of IC Engines and Automobile.				
2	Describe Refrigeration and Air-Conditioning system with its different applications.				
3	Illustrate about Renewable and non-renewable energy sources and power plant.				
4	Explain Mechanical Power Transmission and different Manufacturing Processes.				
	Course Contents			CO	Hours
Unit 1	Introduction to Thermodynamics: First law of Thermodynamics - Application of first law to steady flow and non-flow processes, limitations of first law (numerical treatment), PMM-I. Second law of Thermodynamics – Statements, Carnot engine, PMM-II			CO1	(08)
Unit 2	Introduction to Automobiles: I.C. Engine : Construction and Working of C.I. and S.I. Engine, Two stroke, Four Stroke advantages and disadvantages, engine components, Air-fuel ratio. Automobile : Different chassis layouts (including electric and hybrid vehicle), Components of vehicle, Types of automobile			CO1	(07)
Unit 3	Introduction to Refrigeration and Air-Conditioning: Vapour compression and Vapour absorption system, refrigerant types and properties. Window Air Conditioning, Split Air Conditioning (descriptive treatment only). Applications of refrigeration and air conditioning			CO2	(06)
Unit 4	Energy sources and power plants: Renewable and non-renewable energy sources. Solar energy: Solar flat plate collector, concentric collector – Parabolic and cylindrical, PV cell, solar dryer, solar cooker. Wind energy. Power plants: Steam, Geothermal, Wave, Tidal, Hydro power. Bio-gas, Bio-Diesel			CO3	(06)
Unit 5	Mechanical Power Transmission: Axle, shaft, keys, pulleys, gears etc. Belt drives, gear drives and chain drives. (Simple numerical treatment on Torque, speed and power for belt and gear drive), Types of coupling, Types of bearing			CO4	(06)
Unit 6	Manufacturing Processes: Introduction to manufacturing processes: Casting process - steps involved in casting, Metal forming processes – Rolling, forging, drawing; Metal removing processes-Turning, Drilling, Milling,			CO4	(07)

Lectures	03 Hrs/week		MSE	20	
Tutorials	00 Hrs/week		ISE	20	
Total Credits	03		ESE	60	
			Duration of ESE	02 Hrs 30 Min	
Course Outcomes :					
1.	Demonstrate a solid understanding of the basic concepts of mechanics.				
2.	Apply problem-solving techniques to analyze and solve problems related to equilibrium of rigid bodies and friction.				
3.	Explain the principles of trusses, including the analysis of joints and sections.				
4.	Utilize knowledge of centroid and moment of inertia, as well as kinematics and laws of motion, to solve practical problems.				
	Course Contents			CO	Hours
Unit 1	Basic concepts and fundamental laws, force, system of forces, resolution and composition of force, resultant, Principal of transmissibility of force, Moment and couple, Varignon's theorem and law of moment, Equilibrium, free body diagram, Lami's theorem, equilibrium equations, equilibrant force.			CO1	(07)
Unit 2	Beam: Definition and types of beams, types of loads, types of supports, analysis of simple by analytical method and virtual work method to calculate support reactions. Friction: Concept of friction, angle of friction, cone of friction, angle of repose. Friction on horizontal plain and on inclined plain.			CO1	(07)
Unit 3	Analysis of Truss: Types of trusses, Assumption, Method of Joints, Method of section, Analysis of simple truss with max. 7 members. Introduction to space truss.			CO2	(07)
Unit 4	Centroid of plane and composite figures, parallel and perpendicular axis theorems, moment of inertia of standard shapes from first principle, moment of inertia of composite figures, radius of gyration, Concept of mass moment of inertia.			CO3	(07)
Unit 5	Kinematics of rectilinear motion, motion curves, Newtons motion Law, Introduction to Projectile.			CO4	(09)
Unit 6	Kinetics: - De Alembert's principle, work-energy principle, Impulse -momentum principle, Collision of elastic bodies; direct central impact, oblique impact, coefficient of restitution, loss of kinetic energy.			CO4	(05)

Teaching Scheme			Examination Scheme		
Lectures	01 Hrs/week		MSE	20	
Practical	02 Hrs/week		ISE	20	
Total Credits	02		ESE	60	
Prerequisite : Professional Skills					
Course Outcomes (CO):					
Students will be able to					
1.	Compare and classify the various learning styles and apply them in their engineering education.				
2.	Develop new ways of creative thinking and learn the innovation cycle of Design Thinking process for developing innovative products.				
3.	Prepare empathy map and journey map for problem.				
4.	Possess skills necessary to communicate design engineering ideas and design and apply innovative ideas using prototypes.				
	Course Contents			CO	Hours
Unit 1	Overview of Design Thinking Process: Understanding the Learning Process, Kolb’s Learning Styles, Assessing and Interpreting, Design Thinking Process: Business context of innovation for applying design thinking, two models of design thinking, phases of design thinking.			CO1, CO2	(03)
Unit 2	Introduction to design thinking and its approaches: Definition of Design Thinking, Need for Design Thinking, Objective of Design Thinking, Origin of design thinking, understanding design thinking and its process model, Human-Centered Design (HCD) process - Empathize, Define, Ideate, Prototype and Test and Iterate or Empathize, Analyze, Solve and Test.			CO1	(04)
Unit 3	Empathize How to emphasize, Role of empathy in design thinking, purpose of empathy maps, Things to be done prior to empathy mapping, creation of user personas, customer journey mapping.			CO2, CO3	(04)
Unit 4	Analyze or Define Root cause analysis, conflict of interest, perspective analysis, big picture thinking through system operator, big picture thinking through function modelling Silent brainstorming, metaphors for ideation, CREATE and What-If tool for ideation, introduction to TRIZ, Inventive principles and their applications			CO1, CO2	(05)
Unit 5	Test (Prototyping and Validation) What is Prototype? Why Prototype? Rapid Prototype Development process, Testing, Sample Example, Test Group Marketing Prototyping, Assumptions during the design thinking process, Validation in the market, best practices of presentation.			CO2, CO4	(05)
Unit 6	Design Innovation Benefits of iteration in the design thinking process, taking the idea to the market, introduction to innovation management in a company.			CO4	(05)
	Laboratory Content				
Experiment 1	Understanding of Design Thinking and its process model, Principles, and tools. (Activity: Design a mind map for processes of design thinking).			CO1, CO2	
Experiment 2	How to Empathize, Role of Empathy in design thinking, Empathy Maps Design. (Activity: Construct empathy maps to provide right solution to any challenges through interviews, GD, observations, and other sources).			CO3	
Experiment 3	Methods for Empathetic Design, Creation of User Personas. (Activity: Construct Persona profile which includes user information).			CO2, CO3	

Experiment 4	Customer Journey Mapping (Activity: Develop customer journey map to provide a roadmap visual of customers experience).	CO3
Experiment 5	Problem clarification, Understanding of the problem. (Activity: Construct worksheet for customer journey map to select best route).	CO1
Experiment 6	Problem analysis and Reformulation of the problem. (Activity: Generate summarized report for customer journey map).	CO2
Experiment 7	Case Study - students can pick one idea from their brainstorm list and use the “Sketch Prototype Worksheet” to sketch out their solution for their classmate.	CO2
Experiment 8	Root Causes Analysis, Conflict of Interest, Description of customer need.	CO4
Experiment 9	Design Cash Flow Diagram and Value Chain Analysis Diagram for weekly expenditure of person.	CO2
Experiment 10	Study the iterations in design thinking process.	CO2, CO4

ME3106-Applied Physics Lab				
Laboratory Scheme:			Examination Scheme:	
Practical	2 Hrs/Week		ISE	25
Total Credits	1		ESE	--
			TOTAL	25
Course Outcomes :				
After the completion of the course, the students will be able to:				
CO1	Demonstrate structure of Material.			
CO2	Demonstrate a behavior of light by LASER, Ultrasonic waves and monochromatic light.			
CO3	Compute required physical quantity from given data.			
CO4	Demonstrate recent synthesis methods for engineering and technology.			
Course Contents				CO
Experiment 1	To identify symmetric elements of Cubic crystal.			CO1, CO3
Experiment 2	To identify crystal structure from X-Ray diffraction pattern.			CO1, CO3
Experiment 3	To determine the velocity of ultrasonic waves in liquid medium by interferometer.			CO2, CO4
Experiment 4	Find an object by Ultrasonic waves			CO2, CO4
Experiment 5	To calculate the divergence of LASER beam.			CO2, CO4
Experiment 6	Determination of wavelength of LASER using diffraction grating.			CO2, CO4
Experiment 7	To study interference pattern by Newton’s ring Experiment.			CO2, CO4
Experiment 8	To determine the specific rotation of the given sugar solution with Polarimeter.			CO2, CO3,CO4
Experiment 9	To calculate Resolving power of Telescope			CO2, CO3
Experiment 10	To understand the quantization of energy by Frank Hertz Experiment			CO2, CO3
Experiment 11	To study Inverse Square Law.			CO2, CO3
Experiment 12	To study fundamentals of fiber optics using fiber optics trainer			CO2, CO3
Experiment 13	To understand the reconstruction of hologram by Holography			CO2, CO3
Experiment 14	To calculate the reverberation time of specific hall.			CO2, CO4
	Demonstration Experiment			
Experiment 15	To synthesize Nano particles by spray Pyrolysis/CVD method			CO4
Experiment 16	To study behavior of material with temperature by TGA/DTA.			CO4
List of Submission:				
1.	Minimum number of Experiments: 10

Government College of Engineering, Karad				
First Year (Sem –I) B. Tech. Mechanical Engineering				
ME3107 : Basic Mechanical Engineering Lab				
Laboratory Scheme:			Examination Scheme:	
Practical	2 Hrs/week		ISE	50
Total Credits	1		ESE	25
			TOTAL: 75	
Course Outcomes (CO):				
Students will be able to				
1.	Explain IC engine components and Two stroke and Four stroke engine			
2.	Demonstration VCR, solar water heating system and components of power plant			
3.	Describe types of gears, gear trains, pump and compressor and power conversion devices			
4.	Demonstration hydraulic turbine and explain metal removal and metal joining process			
Course Contents				CO
Experiment 1	Study and demonstration of IC engine components			CO1
Experiment 2	Study and demonstration of Two stroke and Four stroke engine			CO1
Experiment 3	Study and demonstration vapour compression refrigeration and window air conditioner			CO2
Experiment 4	Study and demonstration of solar water heating system			CO2
Experiment 5	Industrial visit to steam power plant or hydroelectric power plant..			CO3
Experiment 6	Study and demonstration of diesel power plant			CO1,3
Experiment 7	Study and demonstration of types of gears and gear trains			CO3
Experiment 8	Study and demonstration of pumps and compressors			CO3
Experiment 9	Study and demonstration of hydraulic turbine			CO3
Experiment 10	Study and demonstration of metal removing process			CO4
Experiment 11	Study and demonstration metal joining process			CO4
List of Submission:				
Minimum number of Experiments: 08

Course Outcomes (CO): After completion of the course student will be able to

- | | |
|------------|--|
| CO1 | Provide a learning environment to practice listening, speaking, reading and writing skills. |
| CO2 | Assist the students to carry on the tasks and activities through guided instructions and materials |
| CO3 | Effectively integrate English language learning with employability skills and training. |
| CO4 | Provide hands-on experience through case-studies, mini-projects, group and individual presentations. |

List of Experiments		CO
Experiment 1	Newspaper Reading , finding difficult English words to enhance the glossary. Write down the summary of News and Present it effectively.	CO1
Experiment 2	Reading Skills- Reading Book (Any book) finding difficult English words to enhance the glossary. Write down the summary of book/any Topic and Present it effectively. Self-Introduction Activity	CO1
Experiment 3	Reading Skills- Watching English Movies Write down the same to Summaries. Strategies for Creating & Editing Effective Writing -Email Writing Activity	CO2
Experiment 4	Reading Skills- Listening English podcast, (seen and the unseen) Write down the same to Summaries. Extempore Activity	CO3
Experiment 5	Reading Skills- Reading Readers Digest/India Today/Autocar/EFY. Write down the same to Summaries. Strategies for Creating & Editing Effective Writing=Blog Writing (specific/suggest topics/give topics)	CO1
Experiment 6	Watching Ted Talk and summarize it. Strategies for Creating & Editing Effective Writing -Story writing and Narration	CO3
Experiment 7	Develop a Welcome speech on the given Theme/situation /Formulate a speech for introducing a guest in the given situation. Group Discussion- Group Discussion Rules	CO3
Experiment 8	Just a Minute (JAM) -Prepare for 1 min on spontaneous topic and deliver public talk on same.Solving MNC (Company 1) Verbal Ability questions	CO4
Experiment 9	Debate: International Topic and summarize the opinion as a Country. Strategies for Creating & Editing Effective Writing -Email Writing Activity2	CO4
Experiment 10	Writing effective resumes and Cover Letters Mock Interviews (Personal HR)	CO3

First Year (Sem – I) B. Tech. Mechanical Engg.				
ME3109: Applied Mechanics Lab				
Laboratory Scheme:			Examination Scheme:	
Practical	2 Hrs/week		ISE/CA	25
Total Credits	1		ESE	---
			Total: 25	
Prerequisite : Applied Physics				
Course Outcomes:				
1.	Demonstrate a clear understanding of the fundamental concepts in mechanics, including the basic laws governing force, moment, and couple.			
2.	Apply the principles of Varignon's theorem, the law of moments, Lami's theorem, and the importance of free body diagrams in problem-solving.			
3.	Develop a comprehensive understanding of the behavior and analysis of simple and compound beams, as well as the utilization of the virtual work method to determine support reactions.			
4.	Apply practical techniques to calculate the mass moment of inertia (M.I.) for various objects, considering their mass distribution and shape.			
Course Contents				
Experiment 1	To verify the polygon Law forces. Objective: Study basic concepts and fundamental laws, force, moment and couple.			CO1
Experiment 2	To understand the nature of forces in the members of jib crane. Objective: Study resolution and composition of force, system of forces, resultant			CO1
Experiment 3	To verify law of moments using Bell crank lever Objective: Study Varignon's theorem and law of moments, Lami's theorem, and free body diagram.			CO1, CO2
Experiment 4	To determine the reaction for simply supported beam. Objective: Analysis of simple and compound beams, virtual work method for support reactions			CO1, CO3
Experiment 5	To determine mass moment of inertia of Flywheel. Objective: To determine Moment of inertia of a Flywheel.			CO1, CO4
Experiment 6	To calculate the efficiency of simple screw jack. Objective: Study of simple lifting machine using screw jack.			CO1
Experiment 7	To determine the mechanical advantages, velocity ratio & efficiency of a differential wheel and axle.			CO1
Experiment 8	To determine the coefficient of restitution for different materials. Objective: To determine the coefficient of restitution for a given pair of materials.			CO4
Experiment 9	Drawing sheet: To find resultant - 3 problems			CO1
Experiment 10	Drawing sheet: To find support reactions - 3 problems			CO1

Lectures	03 Hrs/week		MSE		20
Tutorials	01 Hrs/week		TA		20
Total Credits	04		ESE		60
			Duration of ESE		02 Hrs 30 Min
Course Outcomes: After completion of the course the student will be able to					
CO1	Solve ODEs arising in Engineering domain using analytic approach. Learn 3D geometry.				
CO2	Apply advance integral functions and technique.				
CO3	Express any periodic function in terms of series expansion.				
CO4	Calculate area enclosed by simple curves and volume of solid with the knowledge of higher order integrals.				
	Course Contents				CO
Unit 1	First Order Ordinary Differential Equations: Exact differential equations, Integrating Factor, Equations reducible to Exact, linear and reducible to linear differential equations, Applications: Rate of decay and growth, Newton’s law of cooling, Conduction of heat.				CO1 (7)
Unit 2	Introduction to Three Dimensional Geometry: Sphere:-Equation of a sphere whose diameter is the line joining two given points, Equation of sphere passing through four points, Cylinder: - Equation of a cylinder with given axis and guiding curves, Right Circular Cylinder, Cone:-Equation of a cone with its vertex at origin, Equation of a cone with given vertex and guiding curve, Right Circular Cone.				CO1 (7)
Unit 3	Differential and Integral Calculus: Gamma function, Beta function and its properties, Differentiation under integral sign, Leibnitz rule.				CO2 (7)
Unit 4	Fourier series: Dirichlet’s conditions, Fourier series in the range $(0, 2l)$ and $(-l, l)$ where l is arbitrary, Even and odd function, Half range sine and cosine series in the range $(0, l)$ where l is arbitrary.				CO3 (7)
Unit 5	Surface Integral and Applications: Evaluation of double integration in cartesian and polar coordinates, Change of order of integration, change of variable, Area enclosed by plane curves.				CO4 (7)
Unit 6	Volume Integral and Applications: Evaluation of Triple integration in Cartesian, spherical polar and cylindrical polar coordinates, volume of solids by triple integral.				CO4 (7)
Tutorials: Following is tentative list of tutorials to be conducted in the tutorial class based on- 1. Exact, reducible to exact, linear and reducible to linear differential equations. 2. Applications to differential equations. 3. Sphere and Cylinder. 4. Cone and right circular cone. 5. Beta and Gamma function. 6. Differentiation under integral sign. 7. Fourier series. 8. Half range Fourier series. 9. Surface integration and its applications. 10. Volume integration and its applications.					(10)

Teaching Scheme			Examination Scheme		
Lectures	03 Hrs/Week		MSE	20	
Tutorials	00 Hrs/Week		ISE	20	
Total Credits	03		ESE	60	
			Duration of ESE	02:30 Hrs	
Course Outcomes (CO): After completion of course the Students will be able to					
CO1	Understand fundamental of Chemistry relevant to Engineering field.				
CO2	Differentiate hard and soft water; solve the related numerical problems on water purification and its significance in industry and daily life.				
CO3	Equipped with basic knowledge of polymer reinforced composites, applications of semiconductor conducting polymers in energy harnessing.				
CO4	Acquire Basic knowledge of Nanochemistry to appreciate its applications in the field of Medicine, data storage devices and electronics.				
CO5	Understand the causes of corrosion, its consequences and methods to minimize corrosion to improve industrial designs.				
	Course Contents			CO	Hrs
Unit 1	Energy Science: Fuels: Fuel, classification, characteristics of good fuel, comparison between solid, liquid, gaseous fuel. Calorific value, low and high calorific value, units of calorific value, determination of calorific value by Bomb and Boy’s calorimeter. Energy storage Systems: Battery technology: Introduction, Classification, characteristics, construction, working and applications of Li-ion battery. Solar Energy: Introduction, construction, working and applications of photovoltaic cell. Green fuel: Hydrogen-oxygen fuel cell. Construction, working and applications			CO1 CO3 CO4	(07)
Unit 2	Corrosion and it’s Prevention: Introduction, Electrochemical theory of corrosion, Types of corrosion - Differential metal and differential aeration – (pitting and water line) caustic embrittlement. Factors affecting the rate of corrosion: ratio of anodic to cathodic areas, nature of corrosion product, nature of metals, pH, conductivity and temperature. Corrosion control: Cathodic protection - sacrificial anode and impressed current methods, Metal coatings – Galvanization and tinning, Anodizing – Anodizing of aluminum, Organic coatings: Paint and varnishes. Metal finishing: Introduction, Technological importance. Principles of electroplating of chromium. Metal cladding and Metal spraying.			CO1 CO5	(07)
Unit 3	Engineering Advanced Materials Composites: Introduction, constitution, classification. Types: Particle, fiber, fiber glass, hybrid and reinforced Composites with applications. Lubricants: Introduction, Classifications, functions, Properties- Viscosity index, Flash point, and applications of lubricants. Cement: Types of cement, constituents, properties of cement. Polymers: Introduction, Synthesis and applications of Polyurethane, polycarbonates, araldite (Epoxy resin). Conducting Polymers: Synthesis & Mechanism of conduction in polyacetylene. Biodegradable polymers: Introduction and their requirements. Synthesis and properties of Poly lactic acid. Applications of biodegradable polymers in medical industry.			CO1 CO3	(07)
Unit 4	Environmental & Green Chemistry: Introduction, definition, Major environmental pollutants. Air, water and noise pollution.			CO1 CO2 CO3	(07)

	Optimum levels of pollution. Significance and determination of COD and BOD. Solid waste treatment of collection of NKP. Greenhouse effect and global Warming. eWaste. Radioactive pollution. Basic principles of green chemistry. Various green chemical approaches – Microwave synthesis, Bio catalyzed reactions, Phase transfer catalysis.	CO4	
Unit 5	Water technology: Introduction, sources and impurities in water, portable water; meaning and specifications (as per WHO standards), Hardness of water, types, determination of hardness using EDTA titration, softening of hard water by ion- exchange process. Numerical problems on hardness of water. Biological oxygen demand (BOD) and Chemical Oxygen Demand (COD) Determination of COD of industrial waste water. Purification of water for town supply. Instrumental methods of analysis: Introduction, Theory, Instrumentation and applications Flame Photometry.	CO1 CO2	(07)
Unit 6	Nanomaterials: Introduction, Nanomaterials- preparation of CNT by different methods, CNT properties and applications, size dependent properties (Surface area, Electrical, Optical, Catalytic and Thermal properties). Synthesis of nano materials: Top down and bottom up approaches,, Carbon nano tubes and graphenes – properties and applications. Characterization method for Nano materials, SEM (Scanning Electron Microscope), AFM (Atomic Force Microscopy), STM (Scanning Tunnelling Microscopy)	CO1 CO3 CO4	(07)

Course Outcomes (CO):

After successful completion of course the Students will be able to

CO1	Understand fundamental of Chemistry relevant to Engineering field.
CO2	Differentiate hard and soft water; solve the related numerical problems on water purification and its significance in industry and daily life.
CO3	Equipped with basic knowledge of polymer reinforced composites, applications of semiconductor conducting polymers in energy harnessing.
CO4	Acquire Basic knowledge of Nanochemistry to appreciate its applications in the field of Medicine, data storage devices and electronics.
CO5	Understand the causes of corrosion, its consequences and methods to minimize corrosion to improve industrial designs.

First Year (Sem – II) B. Tech. Mechanical Engineering					
ME3203: Engineering Graphics					
Teaching Scheme			Examination Scheme		
Lectures	03 Hrs/Week		MSE	20	
Tutorials	00 Hrs/Week		ISE	20	
Total Credits	03		ESE	60	
			Duration of ESE	3 hrs	
Prerequisite: Nil					
Course Outcomes (CO):					
Students will be able to					
1.	Understand theory of projections and apply it for communication shape and size of geometric element using appropriate projection method				
2.	Draw different engineering curves using various methods, and know the application in engineering filed				
3.	Analyze visually and draw projection of points, straight lines, planes, solids				
4.	Appreciate use of Orthographic & isometric drawing, sections of solids, and development of surfaces				
	Course Contents			CO	Hrs
Unit 1	Introduction to Engineering Drawing& Engineering Curves: Principles of Engineering Graphics and its significance, usage of Drawing instruments and accessories, layout of drawing sheets, different types of lines used in drawing practice, lettering, Introduction to SP46: 2003, Dimensioning system as per BIS, Geometric constructions. Engineering Curves: Construction of regular polygons, Conic sections; Construction of Ellipse –(Focus- Directrix method, Rectangle method, arcs of circle, four center method), Parabola - (Focus- Directrix method, Rectangle Method), hyperbola – (Focus-Dyrectrix method); Cycloidal curves, (including Epicycloid, Hypocycloid), and Involute, Methods to draw tangent and normal for above engineering curves. Applications of curves in engineering.			CO1, CO2	(07)
Unit 2	Theory of Projections: Principles & theory of Projections, projection systems, projection methods, First angle & third angle method of projection, relative positions of different view, symbol of first angle and third angle; Auxiliary planes; AIP, AVP, views on auxiliary planes. Projection of Points & Lines: Projections of Points situated in any quadrant, notation system. Projection of straight line; parallel, inclined and oblique w.r.t. reference planes (RP’s). Traces of lines, (Lines only in first quadrant)			CO1, CO3	(08)
Unit 3	Projections of Regular Planes: Types of planes, Projections of planes, positioned - parallel, inclined, and oblique w.r.t. HP & VP planes.			CO1, CO3	(05)
Unit 4	Projections of Regular Solids: Types of Solids, Projection of simple solids; Prisms, Pyramids, and cylinder, cone inclined to both reference planes. Projections of Regular Sectional Solids: Sections and Sectional views of right angular Solids; Prism, Cylinder, Pyramid, Cone – Auxiliary Views; finding true shape of a section.			CO1, CO3, CO4	(09)
Unit 5	Isometric Projections: Principles of Isometric projection – Terminology, Isometric Scale, Isometric Views of standard shapes & standard solids.			CO1, CO4	(05)
Unit 6	Development of Surfaces: Introduction, methods of development, parallel line development, Radial line development only.			CO4	(06)
In semester Evaluation (ISE) shall be done on punctuality, interactive participation in class, laboratory work done and oral assessment

Lectures	03 Hrs/week		MSE	20	
Tutorials	--		ISE	20	
Total Credits	03		ESE	60	
			Duration of ESE	02 Hrs 30 Min	
Course Outcomes (CO)					
Students will be able to					
1	Students will be able to analyze DC and AC circuits.				
2	Students shall understand construction and working of electric machines such as DC motors and induction motors				
3	Students will get general idea about semi-conductor devices				
4	Students shall understand principle of working of various sensors, transducers and actuators				
	Course Contents			CO	Hours
Unit 1	DC circuits: Ohm’s law and Kirchhoff’s laws Types of sources, dependent and independent sources, source transformation, voltage division and current division, Mesh and Nodal analysis, star-delta transformation			CO1	7
Unit 2	AC Circuits: Representation of Sinusoidal waveform, Phasor representation, average value, RMS value, form factor, peak factor of sinusoidal voltage and currents, Analysis of ac circuits with R,L,C & RL,RC,RLC circuits with phasor diagrams .Real power ,reactive power ,apparent power and power factor.			CO2	7
Unit 3	Introduction to Electrical Drive: Three phase induction motor: -Rotating magnetic field concept, Construction, principle of operation, Equivalent Circuit, Torque-slip diagram, Types- squirrel cage and wound rotor, Starters- Different types , Starting methods, DC motors: - Starting, construction, working principle, Speed control, motor selection factors of DC shunt motor and Series motor.			CO2	7
Unit 4	Digital Electronics: Arithmetic operation and Minimization Techniques: Number conversion, Arithmetic’s operation, Logic gates, Minimization Techniques: - Boolean postulates and laws. De Morgan Theorem, Principle of Duality, Minimization of Boolean expressions: - SOP, POS, Karnaugh map. Semiconductor Devices : Semiconductor fundamentals, Diode. Transistors: BJT, MOSFET, their structures and principle of operations; Amplifiers: Functionality, specifications (voltage gain, current gain, input resistance, output resistance, dynamic range, bandwidth, linearity, power efficiency etc.) Rectifiers:-Half & full wave rectifiers circuits.			CO3	7
Unit 5	Sequential Circuits and Combinational Circuits:- Sequential Circuits: Latches, Flip flop :- SR, JK ,D,T and Master Slave, Characteristic Table and equation, Edge triggering, Level triggering, Synchronous and Asynchronous counters. Combinational Circuits: Half Adder, Half Subtractor, Full Subtractor, Parallel binary adder/subtractor, Carry look ahead adder, Serial adder/subtractor, BCD adder, Multiplexer, Demultiplexer, Decoder, Encoder.			CO3	6

Unit 6	Sensors, Transducers, Actuators:- Sensors:- Proximity , Pressure, Accelerometer, Motion detector, Capacitive sensing, Position, Infrared, Photoelectric, Image sensor, Temperature, Ultrasound, Humidity, Infrared Transducers:- , Active, Passive, Mechanical, Electrical, Photoelectric. Actuators :- Linear actuators, Rotary actuators, Pneumatic actuators, Hydraulic ,Electric actuators, Magnetic and thermal actuators, Mechanical actuators	CO4	6

ME3205: Indian Knowledge Systems

Teaching Scheme		Examination Scheme	
Lectures	-	ISE	-
Tutorials	-	ESE	100
Total Credits	02		

Course Outcomes (CO): Students will be able to

CO1	Understand and appreciate the rich heritage that resides in our traditions
CO2	Inculcate an understanding of the mind/voice dynamic and its function in Indian knowledge systems
CO3	Learn to appreciate the need and importance of Sanskrit in getting to the roots of the philosophical concepts
CO4	Being primed for practices that will prepare one for the inner-journey to discover the Self

Course Contents

Student should complete any one of the MOOC course certification of Indian Knowledge System and submit the copy of certificate to Head of Department prior to ESE.

Guidelines:

- Duration for completion of MOOC course certification is minimum 8 Weeks.
- Platform: NPTEL or Swayam
- Assessment Guideline:- End semester evaluation will be based on the score secured in NPTEL or Swayam certification and Presentation conducted by Panel of Faculty members.
- 60% weightage will be given for score secured in NPTEL or Swayam certification and 40% weightage will be given for presentation.
- If students fail to complete the NPTEL or Swayam certification, student can complete it from other platforms with the prior permission of Head of department.

ME3206: Programming for Problem Solving					
Teaching Scheme			Examination Scheme		
Lectures	03 Hrs/week		MSE	20	
Tutorials	00 Hrs/week		ISE	20	
Total Credits	03		ESE	60	
			Duration of ESE	02 Hrs 30 Min	
Course Outcomes (CO):					
Students will be able to					
1	Understand the basics of C programming language, including syntax, data types, and control structures.				
2	Demonstrate the ability to write and execute C programs using integrated development environments (IDEs)				
3	Apply problem-solving techniques using C programming by writing algorithms and translating them into code.				
4	Develop debugging and testing skills to identify and resolve errors in C programs.				
	Course Contents			CO	Hours
Unit 1	Introduction to Programming Introduction to components of a computer system. Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/Pseudocode with examples			CO1	(05)
Unit 2	Introduction to C language Importance of C Language, Structure of C Program, Constants, variables and data types. Operators and expressions, managing input / output operations, Decision making, branching and loop statements, Storage classes, Functions, elements of User defined functions, return values and their types, methods of parameter passing, recursive functions.			CO1	(07)
Unit 3	Arrays and String Declaration and initialization of arrays, one dimensional and two-dimensional arrays, operations on array, multidimensional arrays, Declaring and initializing string variables, string handling functions, passing array and string to function			CO2	(07)
Unit 4	Structure Defining and declaring structure, accessing structure members, structure initialization, array of structures, nesting of structure structures and functions, union and enumeration			CO3	(07)
Unit 5	Pointer Defining and declaring pointers, accessing the address space of a variable, declaring and initialization pointer variables, accessing a variable through its pointer, pointer as a function argument, pointer expressions, pointers to arrays, strings and structure, Dynamic memory allocation			CO4	(07)
Unit 6	File Handling File Operations, Character I/O, String I/O, Formatted I/O, Block I/O, Random File Operations			CO4	(07)

Government College of Engineering, Karad				
First Year (Sem – II) B. Tech. Mechanical Engineering				
ME3210: National Cadet Corps				
Teaching Scheme		Examination Scheme		
Lectures	04 Hrs/Week	MSE		
Tutorials	-	ISE	50	
Total Credits	1	ESE		
		Duration of ESE		
Prerequisite: Nil				
Course Outcomes (CO): Students will be able to				
1.	Develop sense of discipline, character, and brotherhood, the spirit of adventure and ideals of selfless service.			
2.	Understand grace and dignity in the performance of foot drill.			
3.	Understand the importance of a weapon its detailed safety precautions necessary for prevention of accidents.			
4.	Develop awareness about different types of terrain and how it is used in battle craft.			
	Course Contents			CO
Unit 1	Following list of topics and practical's are to be covered during NCC training sessions. - National Integration & Awareness - Personality Development and Leadership - Disaster Management - Social Awareness & Community Development - Health & Hygiene - Environment Awareness and Conservation - Drill - Weapon Training - Adventure Training - Introduction to Armed Forces - Obstacle Training - Military History - Introduction to Infantry Weapons and Equipment - Communication - Map reading - Field Craft and Battle Craft			CO1, CO2, CO3, CO4,
	Min. 75% attendance is mandatory. NCC training will start in Semester I			
	Eligibility Criteria for NCC certificate A Exam 1. The Cadet must have attended a minimum of 75% of total training periods laid down in the syllabus for the first and second years of Junior Division/Wing NCC (All Wings). 2. In order to count his previous tenure, the break in the NCC Training Tenure of the cadet prior to his appearing in the exam should not exceed more than 12 months at one time. 3. In case the break exceeds 12 months the following procedure will be followed :- a. A. If he has been on the unit rolls for a minimum of two years before his discharge and had attended 75% of the total periods during his NCC Tenure he will need another 36 periods of training to become eligible to appear for Certificate A examination. b. B. In all other cases, where above conditions are not fulfilled, the cadet must attend a minimum of 75%			

	periods of the first and second years of training. 4. Must have attended one Annual Training Camp. 5. NCC training activity will be covered in Semester I & II.

Course Outcomes (CO): Students will be able to				
1.	Understand the community in which they work and their relation			
2.	Identify the needs and problems of the community and involve them in problem-solving			
3.	Develop capacity to meet emergencies and natural disasters			
4.	Practice national integration and social harmony.			
5.	Utilize their knowledge in finding practical solutions to individual and community problems.			
	Course Contents			CO
	National Service Scheme:			Hrs
	The NSS activities and allotted hours are mentioned below:			(30)
	1. Blood donation Camp	8 Hrs.	CO1	
	2. Tree Plantation	4 Hrs.	CO2	
	3. Internal Cleanliness Drive	8 Hrs.	CO3	
	4. External Cleanliness Drive	8 Hrs.	CO4	
	5. Arranging Lectures on Social Issues in schools or villages	4 Hrs.	CO5	
	6. Demonstration of Street Plays on Social issues	4 Hrs.		
	7. Demonstration of Street Plays on Safety issues	4 Hrs.		
	8. Arranging Rally on Social issues	4 Hrs.		
	(Anti-Tobacco, Vysan Mukti etc.).			
	9. Celebration of National Days (As per NSS list)	4 Hrs.		
	10. Arrangement of free medical checkup camp in villages	4 Hrs.		
	11. Arrangement of environment protection awareness camp	4 Hrs.		
	12. Arrangement of veterinary awareness camp	4 Hrs.		
	13. Participation in disaster management training	8 Hrs.		
	14. Arrangement of water conservations awareness camp	8 Hrs.		
	15. Arrangement of rain water harvesting awareness camp	8 Hrs.		
	16. Assisting local administration for law and order, regulation, social issues.	8 Hrs.		
	17. Any other activity as decided by Hon. Principal / Program Officer	8 Hrs.		
	from time to time .			
	Instructions:			
	1) The Students will have to complete for a total period of 30 hours activities (in one Semester) OR Participation in seven days residential camp with completion certificate of NSS camp.			
	2) NSS Volunteer has to complete 30 hours NSS activities mentioned in above curriculum. NSS volunteer has to prepare and submit NSS activity report of 30 hours to NSS Coordinator.			
	3) The In Sem Evaluation (ISE) will be conducted by NSS Coordinator based on the attendance, overall performance and the report.

Professor and Head of the
Dept. of Mechanical Engineering
Govt. College of Engineering, KARAD

Government College of Engineering, Karad				
First Year (Sem – II) B. Tech. Mechanical Engineering				
ME3210: Community Service and Practices (CSP)				
Teaching Scheme			Examination Scheme	
Lectures	00 Hrs/Week		ISE	50
Practical	02 Hrs/Week		ESE	-
Total Credits	01		Duration of ESE	-
Course Outcomes (CO):				
After successful completion of course the Students will be able to				
CO1	understand the community needs in which they are living.			
CO2	identify the problems of the community and help to solve them.			
CO3	apply technical knowledge of respective field to train local community.			
CO4	practice national integration and social harmony.			
	Course Contents			CO
	Community Service and Practices (CSP): 1. Student has to register for CSP with department coordinator. 2. He/she has to complete one of the following two modules. 3. He/she has to obtain certificate of participation from Head of the department to that effect.			Hrs
	MODULE I: The institute has signed MoU with NASSCOM for implementation of digital literacy program (under NDLM - National Digital Literacy Mission). The program shall cover training of school children or village youths on one of the 7 modules designed by NASSCOM such as internet, mobile banking, e-commerce, e-business, use of media like WhatsApp/ linkedin etc. The course details are provided by NASSCOM. The course work of each module consists of presentation of readymade power point slides as a theory and separate practice sessions. The module shall be followed by test and joint certification of successful candidates (institute and NASSCOM). The theory sessions shall be conducted in the respective schools and the practical may be conducted in schools subject to availability of computational facility OR in the computer centre of our institute on weekend. The total duration of the course shall be between 40 to 60 hours. The students shall visit schools covering 20 km surrounding area (rural and municipal schools) and register the school students. The target for each student shall be delivery and certification of one of the modules to a group of 6 school students. Travelling allowance for travel by bus (bus ticket) or sleeper class shall only be admissible to the students at actual subject to prior sanction of Hon. Principal for the activity.			CO1, CO2, CO3, CO4 40 to 60
	MODULE II He/she should participate in all/few of the following activities and complete at least 60 hours of activities for technology transfer to community within 20 km. The activities shall be declared by respective Head of the department. The list of different CSP activities to be conducted under this module shall be but not limited to the following. The activity has to be conducted under the institute banner and counting of its equivalent duration shall be as Indicated against each. He/she should collect total 60 Hours from CSP activities. 1. Two wheeler maintenance 16 Hrs. 2. Motor cycle repairing 16 Hrs. 3. Electrical wiring 16 Hrs. 4. Plumbing 16 Hrs. 5. Carpentry 16 Hrs. 6. Computer Hardware maintenance 16 Hrs. 7. Radio / T.V. repair 16 Hrs.			CO1, CO2, CO3, CO4 60

Exit Course after First Year B. Tech. Mechanical Engineering				
ME-EC-0104: Modelling & Drafting Lab				
Laboratory Scheme:			Examination Scheme:	
Practical	8 Hrs/Week		ISE	50
Total Credits	4		ESE	50
Prerequisite :				
Course Outcomes (CO):				
Students will be able to				
1.	Familiar with the CATIA V5 user interface, including toolbars, menus, and various navigation techniques.			
2.	To apply geometric and dimensional constraints to sketches and convert them into detailed drawings with annotations and dimensions.			
3.	To use different features and commands for extrusion, revolution, fillets, chamfers, patterns, and holes to create complex parts with accurate geometry.			
4.	To define relationships between parts, apply constraints, and analyse assembly constraints and clearances.			
Course Contents				
		CO	Hours	
Experiment 1	Introduction:- CATIA as CAD software: - Concept of Parametric Modelling, Feature Based Modelling, User Interface, Mouse operations, File types and Management, drawing profiles. Major user industries of CATIA.	CO1	04	
Experiment 2	Sketcher:- Profile toolbar, operation (corner, chamfer, re-limitations, transformations, and project 3D element), constraints, types of constraints, workbench, sketch tools, tools (Sketch solving status, sketch analysis, output feature), visualization toolbar, and user selection filter.	CO2	04	
Experiment 3	Modelling of Machined Component (Part Modelling) :- Modelling of Machined component, Advance Design features, Multi-section solid, Removed multi-section solid, Introduction To Multi-body concept, Transformation, Multi-body concept:- Slandered example, Advance Features.	CO2	04	
Experiment 4	Drafting :- Introduction To Drafting & Detailing Theory, Views, Annotations, Surfacing Modeling based Plastic Component, Surfacing, and Advanced Surfacing.	CO3	04	
Experiment 5	Wire-frame Modeling:- Point, Line, Planes, Curves, Circle-Conic, Standard Examples. Use of wire frame modeling,	CO3	04	
Experiment 6	Assembly & Mechanism :- Introduction to Assembly:- Types of assembly approach, Types of Constrains and DOF, placement of components in the Assembly, Manipulating Components, BOTTOM UP Approach, TOP DOWN Approach, Assembly Drafting:- Scene(Exploded View), Bill of material, Ballon creation, Graph Tree Reordering.	CO4	04
