## **PROJECT: ME**

**Topic : Hand Gesture Recognition for deaf and dumb people using GSM module**

Generally dumb people use sign language to communicate with other people, but some people who don't understand the sign language properly. This Intelligent system is designed to help the persons those are having disability of listening & speaking. This paper, aim is to overcome the difficulty of dumb people while talking with other people. Sign Language Recognition System is one of the most growing researches today. In this system Recognition of sign language is become easy. A Wireless data gloves is used which is normal cloth driving gloves fitted with accelerometer sensors along the length of each finger and the thumb. Mute people can use the gloves to perform hand gesture and it will be converted into speech so that normal people can understand their expression. "Speech" and "gestures" are the expressions, which are mostly used in communication between human beings.
